The RTPCR test was designed to sequence DNA, not detect infectious disease. Now they are pushing for more and more tests. This looks like they are DNA harvesting. Why?

39 182 370

Yardley Yeadon @MichaelYeadon3 · 7h

Yes, and the inventor of the PCR technique, Kary Mullins, repeatedly observed that though it does selectively detect viral nucleotide sequences, it cannot distinguish fragments of 'dead virus' from this with an active infection. In no way is it a 'gold standard' test.

1 1 11

Yardley Yeadon @MichaelYeadon3 · 7h

Furthermore, it's a cyclical amplification technique. I've seen up to 30 cycles used, which them exposes a serious weakness of PCR: run it a sufficiently large number of cycles & false positive rate climbs unacceptably. Ideally you want a clear gel band after a low no of cycles.

1 2 4

Yardley Yeadon
@MichaelYeadon3

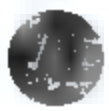
I'm open to being corrected. I've read that previous attempts at a vaccine for coronaviruses have not been very successful, & the Oxford trial (I think) reported a lot of side effects. Away from home until Monday so no access to links - but, as I said, happy to be corrected.

2



Carl Watson @WatsoniCarl · 20h
The reports give details of side effects, which are mainly a headache and soreness at point where administered. These are similar to other deactivated virus vaccinations and nothing that a paracetamol wouldn't sort out!!!

2 1

Gary Sidley #KBF @GarySidley · 3h
We need to bear in mind that, as up to 80% of people with Covid infections are asymtomatic, the side-effects threshold for a 'net loss' outcome for recipients is set very low.

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @GarySidley @WatsoniCarl @LeProfMoriarty

You're spot on. I know some people believe everyone should get vaccinated to protect others. It isn't necessary. However, if that was the goal, the hurdle to clear is incredible. If only 0.1-0.3% die if infected it's intolerable for serious side effects to occur even as rarely..

I don't mind brief pyrexia, that's very common. Similarly, injection site inflammation & occasional infection isn't a big deal. None of this is serious, long lasting or unmanageable. What would worry me is if anyone is so ill they need to be hospitalised even if they survive.

I live nearby just east of Canterbury. What I don't understand is how to distinguish illegals from (legal) asylum seekers. They don't come with barcodes & both are often without papers (for different reasons). Any ideas?

2 2

Grumpyxx @Grumpyxx1 · 32m
How do they leave their own countries and traverse up to ten states without any ID of any kind? They need at least an ID card in their own countries--we all know they destroy their IDs in order to spin a yarn for their asylum claim.

1 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @Grumpyxx1 @SteveLaws19

Yes, those who are economic / illegal migrants do that.
However it's also true that those escaping persecution or war often lose or never had official ID.
Problem is it's literally impossible to distinguish the two. Especially if they claim to be from Syria.

to detect cases that are transmitting.

4/n

6 34 189

Michael Mina @michaelmina_lab · Aug 2

If cases with high (transmissible) viral loads become the target, then it's not a push to achieve cheap $1 daily low sensitivity-to-detect-PCR-positive tests. It's a push to achieve cheap $1 fast daily *HIGH sensitivity-to-detect-transmitting cases in time to act*

5/n

5 52 229

Michael Mina @michaelmina_lab · Aug 2

And to do that, the tests with high sensitivity-to-detect-infectious-people need to be more widespread, need to be used every day or two where outbreaks are occurring, and need only to detect greater than 100,000 or a million virus copies per ml - not 100 copies, like PCR.

6/6

36 52 255

Yardley Yeadon
@MichaelYeadon3

Replying to @michaelmina_lab

It's a neat idea, but I believe it's wrong headed. It's literally impossible to repress to 0 or permanently hide from an endemic, highly infectious virus. We might be able slightly reduce the rate of spread while doing more to protect the most vulnerable.

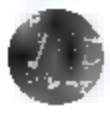
Children being trained for the new society they have planned for us....this is even worse

Take a deep breath. The WHO has nothing to do with the natural development of your child s sexuality, they do not give a damn about God's Nature, they seem to be quite in a hurry. Reading through the document gave me shivers a lot of times and made me wonder, what percentage of the world population is aware of the sickening agenda of these sick people? I will put the whole document at the end of this, will take out a fragment here, to be found on page 40, talking about the education for children from age 0 – 4



Sexuality

- enjoyment and pleasure when touching one's own body, early childhood masturbation
- discovery of own body and own genitals
- the fact that enjoyment of physical closeness is a normal part of everyone's life
- tenderness and physical closeness as an expression of love and affection
- gain an awareness of gender identity
- talk about (un)pleasurable feelings in one's own body
- express own needs, wishes and boundaries, for example in the context of "playing doctor"
- a positive attitude towards one's body with all its functions = positive body-image
- respect for others

Do you see? The WHO wants your 4 year young child to masturbate, among other things. They cannot wait for God s natural healthy development, nor did they inform parents about this. I do not think it is far fetched to say that the WHO s agenda wants to prepare our children for the sexual consumption of their overlords. Be aware parents of the world, school isn't a safe place for your children anymore, if it ever was!

I think the avoidable cancer & acute cardiovascular deaths are an underestimate. I recall senior medical leaders distraught that their urgent referrals & workup rates was hugely down (by >50%) & these are v large numbers. I don't think this has yet recovered.

Mike Hogan @MSHogan63 · 3h
Drs estimate there will be upwards of 50,000 deaths just from untreated cancer. Then there heart disease stroke, Alzheimer's, drug addiction, alcohol abuse, depression. The government estimates lockdown will account for 200,000 excess deaths

1 4 6

Adrian Gavin @fulham1958 · 2h
My cancer specialist can now only get about 50% of her patients in for their delayed check ups.

This is what I and many others predicted in March. Read my tweets.
The lock down will cause many more deaths than having no lock down at all.
We did not save all lives, we only saved people dying from the virus at the expense of people now dying because of lock down.

1 3

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @GaleMic76962197 @ClarkeMicah

Yes, I agree & said so early on. I also predicted the infection would be self limiting as has happened.
I further predict with total confidence that there'll be NO 2nd wave & the virus will not return (unless it mutates to a more lethal form, for which 0 evidence so far).

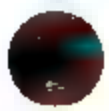
wotwitwotwotwow @wotwitwotwotwow · 2h
I'm arguing that they were 'due to lockdown' because they were due to Covid and arguably our poorly funded and managed health service.

This is irrelevant to the bulk of lockdown which was about reducing virus spread.

People made their own choices, that's a fact.

1

M @mlewis3178 · 2h
So did we entered lockdown due to covid existing or did we enter lockdown due to a government decision to react to covid?



1

wotwitwotwotwow @wotwitwotwotwow · 1h
A government decision. What's your point?

Don't confuse our inadequate health service with lockdown.

1

M @mlewis3178 · 29m
The decision was made by the government. The excess deaths are due to this decision. Of course previous cuts to health service were a factor but once again the decision to lockdown is the result of these excess deaths.

1 1

infectiousness is unclear & more data are needed"

2

Hugh Osmond @hughosmond · 8h

Absolutely. Because of the amplification cycles PCR tests can detect levels of virus far below those necessary to cause illness or infect others.

1 1 1

Yardley Yeadon @MichaelYeadon3 · 7h

Hugh, followed, you've v informative tweets. What info have you on the sensitivity vs specificity of the tests for antibodies? People are assuming the people with antibodies in this test & only these have encountered the virus. I believe the test underestimates nos infected.

1

Hugh Osmond @hughosmond · 1h

Yes for sure. It seems certain that a) some people gain immunity via T cell response without significant antibody generation and b) antibodies fade with time but T cell immunity remains. So not a reliable test for immunity at all. Which is annoying.

1 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @hughosmond @uksciencechief

Good points. So it's not just a matter of increasing sensitivity, although that might reveal more who've seroconverted? Yet, there'll genuinely be those who've been infected who won't display antibodies? I expect all immune responses are continua.

how much more evidence are people going to need to see this for what it is?

12 22 153

Mark Leone @k4xml · Aug 5
When we read that Herd Immunity Threshold may be 15-25%, what is that specifically referring to? The fraction of people infected with the virus? Or does it include those with legacy T-cell immunity? Trying to understand how the cases curve relates to prospects for reaching HIT.

I believe it's "% of total population which get infected".
In U.K., 25% is around 16million. If we assume the infection fatality ratio is around 0.3% then 47k deaths implies approx 15.5million infections. Remarkably, the pandemic is ending in U.K.
Biology is wonderful, isn't it?

This is why the pandemic is ending in U.K. The virus is running out of susceptible people to infect. If you agree, please retweet. If you disagree, pls debate with courtesy & evidence. I will do my best to respond in kind. Help welcomed in any debate!

2

Robert Geller @rmgeller · Aug 5
Once HIT is reached, due to T-cell and antibody immunity, cross-immunity with other coronaviruses, pop. heterogeneity, and other factors, growth slows to R < 1 and eventually burns out. Unfortunately, it is a slow burn, which is still perfect fodder for the media to spin.

2 2

Yardley Yeadon
@MichaelYeadon3

Perfectly stated. For those who don't know, at least 3 leading labs have independently shown that around 30% of pop had pre-existing T-cell reactivity to the virus, even though they'd seen only related CoVs. Ferguson's models assume 100% susceptibility.

..degree. We know some people eliminate the virus quickly, even without prior T-cell reactivity. This is because some innate competency is v effective (eg release of IFN; see also Synairgen press release). It'd unlikely they will seroconvert & if they do, Ab titres will be low.

I think it's something about all of us having a social responsibility. You know, before Thatcher did away with Society, people used to look after and care for eachother.
Or am I missing something?

1

Yardley Yeadon @MichaelYeadon3 · 2h
If you believe the restrictions applied made any difference at all, I'd understand your reply & would second it.
But it's actually a bad thing to prevent healthy young people develop immunity, because they then can't transmit it in the future. These measures are damaging.

1

chris shaw #FBPD 3.5% @velocityblade · 1h
Whilst they are developing their immunity - a point still not proven with all the strains of Covid 19 - they would be free to go about risking infecting those with poorer immune systems.
That's my point.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Even if that's true, surely you're imaginative enough to realise, with certainty, that every time the virus re-enters their community, those young people who biology would have as more resistant to virus (if not immune) are instead fully susceptible & will act as vectors.

So you might get lucky once, but it's impossible to avoid endemic viruses indefinitely. What protects the vulnerable is to have around them as many are possible who cannot act as vectors. It's a public health policy error, what they're doing. Again. No evidence of learning at all

They have attained that elusive Herd Immunity and they did it without decimating the economy and ruining lives. But no, we don't want to learn that lesson.

2 4

Augustus "Wear. A. Mask." Greene @ExaltedOne7 · Aug 4
As far as any medical professional/expert can tell there is no such thing w/out a vaccine. Asymptomatic has almost no immunity, those that get moderately ill may have weeks worth. Beyond that experts have no grasp on lasting immunity. Let's not act like it's easy w/out a vaccine

2 6

Yardley Yeadon
@MichaelYeadon3
Follow

Replying to @ExaltedOne7 @ElizabethLycar @bopinion

Not true. The sole reason why UK death rate has slowed to a trickle after 15 weeks of decline, with no reversion, is because the virus is running out of susceptible people to infect. Latest paper out of Stockholm shows the maths. The herd immunity threshold is low & we're ~at it.

Both sweden and Italy are almost over th virus. Sweden barely tried to stop it and Italy was too late. Both countries took unhindered spread and are close to immunity now.

2 2

Penelope Mills @pmills_Apio87 · Aug 5
No country is anywhere near herd immunity! You need at least 60 % of a population to be infected & produce antibodies that last for months for herd immunity to start coming into affect. Rarely achieved for diseases without a vaccination program in place.

3 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @pmills_Apio87 @AdamRussell_ @bopinion

I'm sorry, but you're quite wrong. It's widely accepted that 30% were carrying a degree of prior T-cell immunity. An unknown fraction repell viruses via innate immune mechanisms such as IFN, most young children are unable to act as vectors and population is very non-homogeneous.

Problem is that you, @scotgov, don't have some unique ability which permits you to know what is firmly established & that which is unlikely to be correct.
Recently, it has been the case that the authorities are the ones who, more often than others, make misleading statements.

No, around 40 countries have re-opened or never closed their primary schools. None have experienced bad outcomes for the pupils, teachers or families. This is probably because most kids have already had it or don't get ill with it & are poor transmitters. I expect R to fall.

James @hortijames · 3h
May I. Thanks as a farmer I know there will never be a food shortage in this country. We may run out of avacados but we will never run out of food.

3 7

Geoff Barton @GeoffBarton9 · 1h
Really? We haven't been self sufficient for centuries.

2

James @hortijames · 50m
Centuries? Or do you mean people aren't content with eating seasonal food that is sustainably produced, with no air miles. As I say Uk farmers can feed the nation, but the nation isn't happy with local food, they want environmentally damaging avocados, and air freighted fruit.

1 2

Geoff Barton @GeoffBarton9 · 47m
Even before ww1 we couldn't feed ourselves. We had to import some food. The beginningbifvtge 19thbcentury was probably the last time you could say we were self sufficient although even then we imported some food.

1

Yardley Yeadon

Huge difference between choosing to import food because there are types & timings which cannot be accommodated locally & 'not being able to grow enough food to avoid starvation'. We're in the former pattern. Clear?

1

Yardley Yeadon @MichaelYeadon3 · 52m
It probably has a place. Not sure what that is, though. We've certainly not used testing in a way which is useful. We've run too few representative samples, so we've no idea how many have been infected. 2million? 20million? HMG doesn't know.

1

chris shaw #FBPD 3.5% @velocityblade · 5m
You only need a surprisingly small sample of a heterogeneous whole to be able to get better than 97% accuacy with a 5% confidence variation.
Test, track and trace has worked elsewhere: we fail at the first, second and third of these.

I know you're correct about representative sampling. It's very useful to know empirically what % of a town or city is infected at any time, over time, something we've failed to do (as far as I can tell). At present, we're increasing the # of tests. No idea why, at this stage.

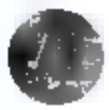
Conservative Governments in Canada regularly not only run balances budgets but they even pay down national debt
Republicans tax less and spend more.
Republicans are not Conservatives when it comes to economics
(I'm a dual citizen)

1 4



Yardley Yeadon @MichaelYeadon3 · 22h
Doesn't Canada have very high income from oil/gas & mining commodities? Norway too is often praised for its financial management yet it too gets huge wealth from fossil fuels.

1

Noah @noard_raine · 6m
I don't think that matters. Our governments tax revenue was around 3 1/2 trillion last year. They're fully capable of working on the deficit spending and the debt. They just won't

I may be labouring under the misapprehension that the budget even before covid19 was stubbornly >100% of national income? Tough to take out 3% of spend & that would have taken us to neutrality? How would you have HMG cut def/debt?

You only need a surprisingly small sample of a heterogeneous whole to be able to get better than 97% accuacy with a 5% confidence variation.
Test, track and trace has worked elsewhere: we fail at the first, second and third of these.

1 1

Yardley Yeadon @MichaelYeadon3 · 14m
I know you're correct about representative sampling. It's very useful to know empirically what % of a town or city is infected at any time, over time, something we've failed to do (as far as I can tell). At present, we're increasing the # of tests. No idea why, at this stage.

1 1

chris shaw #FBPD 3.5% @velocityblade · 9m
We should test all the population. Most vulnerable first, least vulnerable last. Simultaneously, track, trace and inform.

When theatre staff stop wearing masks so they don't run the risk of infecting their patients, I'll stop wearing masks in public so I don't run the risk of infecting other people.

1

Yardley Yeadon
@MichaelYeadon3
Follow

Replying to @velocityblade @MattHancock

Is that a good test? Theatre staff will always wear masks because of the greatly elevated risk of lethal infection in a compromised patient. They are a non specific barrier. Street masks are intended to reduce, specifically, SARS-CoV-2 transmission, a need that's almost gone.

Our leading politicians & their scientific advisors appear to lack basic inquisitiveness. Nothing they're now saying or doing indicates the slightest degree of learning or amendment since before the lockdown. Pitiful.

There's been reports of spikes, flare ups & spreading cases for 6 weeks now. On precisely no occasions have these reports been followed by increased admissions & deaths. To the contrary. Furthermore the % positive test results are falling so more cases are much more tests.

The pandemic is all but over, not due to human efforts. It's solely a biological equilibrium & why the daily deaths v time profiles of many countries are identical, not just similar. Occam would've a lot to say about that.
You're free to think what you want, but you're wrong.

Estimated peak infection rate was several hundred thousand PER DAY. So 1000 is a fraction of 1% & is beating it, though it's a stupid word. No one 'beats' a virus, your society comes into equilibrium with it.

Cornubian @Cornubian2 · 28m
To beat the virus, stop putting covid on death certs when people die of other things and stop using PCR tests that give majority false positives when prevalence is low.

1 1

Toria @VLP_260770 · 10m
Really? How would that have changed 65,500 excess deaths which peaked two weeks into lockdown and fell to normal average during lockdown? What killed most of those people if it wasn't covid?..and isn't the main issue with PCR testing false negatives?

1

Yardley Yeadon
@MichaelYeadon3

Whitty concedes that infections had peaked & BEGAN TO FALL BEFORE lockdown. Check testimony to a select cmte. Having established that lockdown didn't turn the tide, there are few plausible explanations for what did. That cause is the same one responsible for completing the job.

Britain beating virus? More than a thousand new cases yesterday. Highest infection rate since June. Daily Express is not a newspaper. It's a Tory propaganda sheet. So why is @BBCNews quoting this nonsense without question? Start telling the truth.

5 5

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @MFIJake @BBCNews @hendopolis

No, it's not true. The data speak of highest no of cases since June, not rate. All they've done is test far more people. The positive test rate has fallen from 25-30% to well under 1%.

5 5

Stefan Davies @StefanDavies91 · 1h

It is the Express but with more testing, the number of cases is likely to increase, surely? Hospitalisation and mortality rate a much better indicator of the current situation IMO.

1 1

Jake James #FBPE #NotMyPM #RejoinEU @MFIJake · 55m

So how many people are being tested daily? Answer: We don't know because the figures have not been published for months.

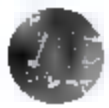
Well "light complexion black man not *really*black enough to have *really*been racially profiled" is quite the stretch from a snatched glimpse of a forearm on a phone video, but die on that hill if you want.

1 1



Marius Stancu @unmariuss · 3h
My dude, I've been stopped at enough airports to understand how profiling works. If you don't look a certain way, you don't get profiled. By definition you have to fit the profile. So yeah, I'm saying I'm not 100% sure this was racial profiling.

1

Stephen Bevan @StephenBevan15 · 3h
You are also saying he is white when DB has said he is black. I think she knows the specifics of his looks and features rather better than you do, which let's face it is next to nothing

0.61% of those tested were positive! still need to control it and follow guidelines but considering it was 40% then I think it is still under control. It has remained 0.6% for the last week or more so no visible increase in trend.

2

Yardley Yeadon @MichaelYeadon3 · 4h
I have a major concern with the data when the genuine positive rate is so low. That's because the test has a false rate, which based on previous comments, is unlikely to be as low as the actual rate (0.5%). It is possible that almost all random screening positives are now false.

1

Kevin Crook @KevinCrook · 3h
I guess its all a waste of our time then!

1

Yardley Yeadon @MichaelYeadon3 · 2h
I do think we've reached the limit of what can be done with mass testing in people who aren't unwell. This is because the true prevalence of virus is at or lower than the limit of detection. It's a kind of 'blq' (below limit of quantification). I'd cease mass testing & limit it..

Prepare for another lockdown. They need another one to completely destroy our economy, take more of our freedoms & further their tyrannical plans. Normal flu season is coming, they will use this to increase fear when the elderly & infirm die as, sadly, has always been the case.

57 192 552

Yvonne @KnittingMumWood · 18h

I suggest you get some psychiatric help urgently, absolutely deluded individual. About time you stop watching the pathetic YouTube. Perhaps you all stay off the drugs, obviously you don't live in the real world. Perhaps you should do a shift on ICU and look after covid19 patients

I'm well aware of why liability has been assumed by the state. This is because otherwise no company will conduct vaccine R&D. You don't even need for it to be true that you've been injured by a vaccine, you can still win a jury trial.

I'm no fan of any rushed out vaccine, as the risks are markedly greater than when a careful & slow process is used. Swine flu 2009 is a recent example. I particularly don't want a new technology vaccine. But you speak as if you already know the adverse event profile. I doubt it.

I saw that Spitfire travelling low & fast as it went from Canterbury to - I think - Margate. Though my pictures showed only a tiny object, it was so characteristic of the type that there's no doubt I captured it! I was so pleased. Oh, & that Merlin engine sound is unmistakeable.

Thanks. Is it part of the BBMF? I'm aware of a rare two seater Spirfire flown into & from airfields near to me in Kent. I can never recall the airfield but a pal flies his light aircraft there & I'll meet him on my motorcycle. Perhaps East Sussex?

Carl Heneghan @carlheneghan · Aug 9

think - what does it mean if I have a positive test?' BASE RATE FALLACY 'even tests that have a very low chance of giving a false positive in an individual case will give more false than true positives overall'
en.m.wikipedia.org/wiki/Base_rate... @deb_cohen

16 71 187

Alistair Haimes @AlistairHaimes · 17h

Though looking at the very low prevalence results in ONS weekly survey must mean that false positives are very low. I emailed ONS to ask about this, they have no idea what the operational false positive rate is except that it is very low.

Replying to @AlistairHaimes @carlheneghan @deb_cohen

I'm sorry but you can't conclude that the false positives rate is low from apparent prevalence. The latter might be truly zero & all the positives are false. Semantically you might be right & FP rate is 0.5%, but it's relative to prevalence that matters (apparently 0.5%!)

@BBCNewsnight

This short thread fully explains the public health hazard we're now running. Also, locking down to prevent transmission between the healthy young is a policy error & is more likely to 'kill granny' because immunological 'firebreaks' aren't formed.

Sophie Taylor 💙💙🇬🇧🇬🇧 @SophieT01336713 · 7m

This is hilarious and from the -960's so not long ago 😂

"When retiring to the bedroom, prepare yourself for bed as promptly as possible. Whilst feminine hygiene is of the utmost importance, your tired husband does not want to queue for the bathroom, as he would have to do for his train. But remember to look your best when going to bed. Try to achieve a look that is welcoming without being obvious. If you need to apply face-cream or hair-rollers wait until he is asleep as this can be shocking to a man last thing at night.

When it comes to the possibility of intimate relations with your husband it is important to remember your marriage vows and in particular your commitment to obey him. If he feels that he needs to sleep immediately then so be it. In all things be led by your husband's wishes; do not pressure him in any way to stimulate intimacy. Should your husband suggest congress then agree humbly all the while being mindful that a man's satisfaction is more important than a woman's. When he reaches his moment of fulfilment a small moan from yourself is encouraging

Tony's post

Should your husband suggest any of the more unusual practices be obedient and uncomplaining but register any reluctance by remaining silent. It is likely that your husband will then fall promptly asleep so adjust your clothing, freshen up and apply your night-time face and hair care products. You may then set the alarm so that you can arise shortly before him in the morning. This will enable you to have his morning cup of tea ready when he awakes."

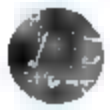
The NFL has now decided to not allow any live Singing of our National Anthem at any games this year

If anyone needs any more reasons to boycott these Fucking Anti America Marxist.....I don't know what you need

We Boycott All Black Lives Matters anywhere we see it



155 1.3K 2.0K

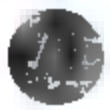
NonZombie - Reclaiming My Time @NonZomb · Aug 10

What about "black national anthem"? Still in or out?

3 1

Yardley Yeadon @MichaelYeadon3 · 23h

No such thing, fortunately, just as there's no 'white national anthem'. What a horrible idea!



1

NonZombie - Reclaiming My Time @NonZomb · 21h

Your argument is so poor jogger. You honestly convinced yourself the jogger drug dealer is at no fault bc the cops decided to become cops?

1 6

Savage KIRA @bluetaygue · 7h
Murder is the unlawful killing of another human being. How is her death lawful?

1 1

Jeff @jeffmn · 7h
seriously, just stop. innocent kid riding a bike being targeted by a thug is absolutely nowhere in the same ballpark as someone getting shot while standing with her drug dealing boyfriend who is SHOOTING AT POLICE.

what should the police have done?

2 10

notankyou @notankyou2 · 6h
Her boyfriend had NO prior drug arrests, and I've seen no evidence by the police that he was a drug dealer. Stop that narrative, please, unless you have evidence.

Most people in their right mind even consider aiming a firearm at an armed official. You're almost certain to die & in the exchange, anyone near you in your foolish choice is likely to be injured if not killed.

I'm trying to listen to this video, and I'm pausing for a second because although I want the Swedes to be right (for personal ethnic reasons that are totally irrational), what I'm hearing makes me, as a mathematician who has thought somewhat deeply about this, want to choke! 1/n

2 1

emma sandberg @emmasandbergt · Apr 19
Can you share your mathematic concerns? I am Swedish and to me it is clear that the Swedish strategy is not based on any mathematic modelling, it is just based on the gut feeling of Johan Giesecke and our state epidemiologist. Whish is that you cannot contain a virus.

No, he didn't say that. He did say that it's not feasible to control or indefinitely hide from a highly infectious respiratory virus which has low lethality. If we could, we would gladly 'Control' annual flu & perhaps common colds as well (several coronaviruses cause colds).

lingen2 @Lingen2L · Apr 19
There is no lockdown in South Korea. Once you are down at a level where you can follow cases and break infection chains, cautious return to a somewhat normal life is possible. Though strict hygiene, masks and social distancing must remain in place.

8 16 110

The White Visitation @R0g3rM3xlc0 · Apr 19
The belief that American society can accept 12-18 months of social distancing and limited human contact is an absurdity. It would mean little to no music, theater, art, birthdays, dinners, and dating. That kind of elimination of social life is completely untenable.

I'm as certain as I can be that a sizeable slice of that excess is DUE to the responses to the virus.

The number of Covid-19 deaths in the UK has been revised DOWN from 46,628 to 41,329.

I suspect we will see further reductions as the dust settles.

58 177 720

An Englishman in Finland @finland_uk · 6h
Deaths related purely to COVID-19 will probably far, far less, the quoted figures have proven to be wrong, with deaths totally unrelated, having been falsly put down to the virus, remember, 55,000 die in the UK every month, very few of these are directly from the virus.

1 1 17

BrexistentialCrisis @BrexistentialC · 4h
We have close to 70000 excess deaths, regardless of however they change definitions, categories and classifiers. That fig won't go away and won't be explained away as if it isn't Covid related.

If some are a consequence of our overreaction to a moderate threat, which I think they are, then that slice has nothing to do with the threat, and everything to do with our response.

We know what's happening: we're testing many more people where the real prevalence is lower than the false positive rate. That's why another odd thing has happened in the last three weeks: the ratio of positives to tests has stopped falling. It's quite obvious most are false pos.

They are doing more Pillar 2 testing and finding many people who are asymptomatic. Comparisons are useless week to week because we have never tested in a consistent way. If we had tested at full capacity in April the numbers would have been in the hundreds of thousands.

The ONS, using a consistent approach throughout based on death certificates, say it is in fact > 50k. The PHE definition, 'test positive then die', missed many of the deaths early on because testing was limited. See weekly ONS reports for details.

The new methodology of excluding those who die of any causes >28 days after testing +ive seems like a v. arbitrary definition - like saying if you don't die within 28 days, you're *never* going to die of it? Ridiculous. There's no logic to it. It's disinformation as its worst.

Almost no one survives 28 days in addition to the time between infection & test and then expires from the virus. Sure, we can find one or two. But most who get very ill but don't die are well on the road for full recovery by 5-6weeks post infection: a disease of short timecourse.

Red Mars @RedMars67867083 · 6h
So if a person tests positive and 28 days later unfortunately dies while still being treated for COV19 e.g. on a ventilator, that no longer counts?

6 10

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @RedMars67867083 @EdConwaySky @PHE_uk

Perhaps but there are almost none of those. Covid19 doesn't cause obstruction & the need for ventilation in itself is a very bad indicator of your chances of dying. Prolonged ventilation even if someone previously well is lethal in most cases if long enough. It's not benign.

The false positive rate is probably the same as the true prevalence. In lay terms, almost all the test positives are false positives. The test we've got is fine when several % are positive. The error rate is ok. We're at sub-0.1% now on prevalence. False positive rate is higher.

Jacqueline Murphy #3.5% @drjawalsh · 7h
Average time from infection to death is 23 days so a cut off of 28 days will surely miss a significant number of daily covid deaths. The @ONS will pick them up eventually but there's at least a two week lag in reporting.

5 6 15

While I agree with the Dynamics, though I heard 23-24 days, the 28day rule if from the date of the positive test. Early on, we only tested ill people, mostly very ill, who were already around 14d since infection. Almost all die or recover inside a further 4 weeks.

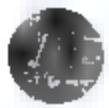
Peter Costen @PeterCosten · 6h

You are mixing two thing here. The revised figures now exclude those who contracted Covid months before, have recovered, but have subsequently died of other causes, including traffic accidents

Until now PHE were counting those deaths as Covid.



> **Paul Masterton** @pmasterton1985
> @HugoGye this moves them into line with what the Scottish Government have been doing for some time now, doesn't it?

1

AlmondTree #3.5% @_almond_tree · 5h

You're missing the point. The official WHO non-covid deaths quotation, also mentioned on the UK blog, states that only something as unrelated as 'trauma' can count as non-covid. If covid19 severely damages your lungs and you die, you've died of covid19.
Link for Scotland?

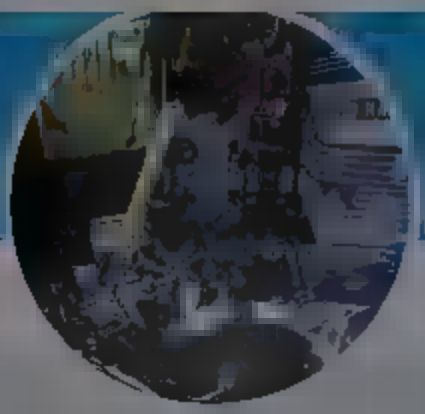
@MichaelYeadon3

Follow



Replying to @_almond_tree @PeterCosten and 4 others

You're correct but that's an extremely rare manner of being killed by this virus. The vast majority die within 3-4 weeks of infection, or they recover. Given testing was mostly of the ill/very ill, they were already 2w post infection & die/recover in well under 28d.

Important for the UK Government to publish accurate figures, including the 'excess deaths' data which shows the full scale of impact of #CoronaVirus, especially in the early weeks when there was a data lag & a slow response from Govt.

2

Paul Williams #WashYourHands @HIP_Energy · 6h
More rubbish, the Gov followed the advice from Sage, no delay, in fact Sage wanted to delay a full lockdown even longer.

Yardley Yeadon

Replying to @HIP_Energy @PaulVittles and 2 others

Unless we've read different minutes, SAGE never recommended lockdown, considering it ineffective & with massive collateral costs.

Covid19 is no longer in the top 10 leading causes of death in U.K., falling below liver failure & malignancies of the intestinal tract. This is good news. The pandemic has long been over. Stop mass testing the well & fully reopen the NHS & society, NOW.

JayT @T1000Jay
Replying to @EdConwaySky @EssexPR @PHE_uk

So we basically have daily deaths that are only c.1% of the normal daily total and an increase in cases because a lot of healthy people now being tested. C'mon, this ended as a public health emergency weeks ago.

I'm hearing BBCR4 state that few people who were infected by Covid19 did not develop antibodies. Unsure that statement can be justified, if the test for antibodies is the original high stringency test, set to have a low false positive rate. Anyone know the spec of the test?

I am sorry you went to Elton. If I had anything to do with selection, I'd deliberately bias job offers to those who've had no leg up at all. Someone helped me that way, when I was orphaned & messed up in my head, took a chance on me & I worked like a dog not to let them down.

Did anyone actually READ the article? Nov 2018, the Independent papers had a piece along the lines that there were 50,000 EXTRA deaths over winter as a result of a poorly effective flu vaccine. Read it again. You'll recall the year easily, as we locked down for months. Oh wait.

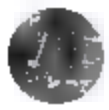
Stating "87% sensitivity" alone is meaningless.

1



Yardley Yeadon @MichaelYeadon3 · 3h
Does it mean if you've Ab in their expected range, it'll be positive 87% of the time? So a false negative of around 1:7?
Ab concs in blood can vary orders of magnitude.
Does anyone have the technical specs of this assay? You know, the one in use, which we've paid for? Anyone?

Check the news via google. In London, the two consultant physicians in charge of acute admissions to London Teaching Hospitals for urgent suspected cancer work up & for acute interventions in CV diseases (heart attack, stroke) made those statements. They're not my guesses.

Professor Whitty: I am confident that Ministers at the time, who were put in an incredibly difficult position, in my view followed the advice given by SAGE, which is clearly signposted through the minutes of SAGE, with a delay that was no more than you would reasonably expect for what are very difficult things to operationalise and decide.

I would make a further comment. Obviously, to be able to do that, there was a bit of signposting that sometimes we may have to go further. Ministers were aware of that, and they said it at the time. For example, on the 16th my memory is that the Prime Minister did not announce schools closing, but I think he said at that time, "and we might need to consider schools closing."

I do not think—I am not saying it now and I am not going to say at any point, to be clear—that in my view there was huge delay between the advice that Ministers received, given the enormity of the difficulties that we were asking of people and the practical implications of what was being done. Does that give you a clear enough answer to the question you are trying to ask me?

Chair: It does.

Professor Whitty: It is a much more complicated picture than that, but as a summary that will do.

What's gone wrong is that teachers have been over generous in their grading, and given students false expectations.
Mock exams should provide an accurate predictor of likely grades, the question you should be asking of schools, is why haven't they?

50 1 50

Sonia R @SoniaRh52696991 · 2h
Oh and here comes the teacher bashing. They spent hours grading, then someone else has to verify. They have to give evidence and there are discussions back and forth.

Facts are that 39% of pupils received an expected grade at least one level higher than they would have secured by examination. Whether teachers did this because they sensed others were, too, I can't say, but what cannot be claimed is that teachers' estimates were reliable.

current Y13s can stay in college/sixth form? Will that mean nobody goes to university this year as they haven't completed the course? Or are they fairly graded on the work they have already done?

2 6

Phil @safc94mad · 3h

No do the resit next month and could have the results beginning of October. So delay university's courses starting by a month and everything could be back on track by next June

1

louise henderson @jab27blue · 2h

So what's going to be in the exams? When different colleges/sixth form teach in different orders of the course, what are they going to take out? How are they going to get the papers and results sorted in time for October?

1 1

AL @alistair_lawson · 2h

You've answered your own criticisms of Govt.
None of this is easy and there aren't simple solutions.

3

Rob Kinnear @kinzoid · 50m

Well there is an easy solution - just follow Scotland's lead and go with the predicted grades instead...

Playing politics again Keir.
There is a really simple solution for those not happy with their grades ... retake the exam at the earliest opportunity.
This has happened because of a once in a century health crisis not by Govt failings.

31 1 27

louise henderson @jab27blue · 3h
These children haven't been taught for almost 6 months, they haven't been prepped for the exams, they haven't been taught the full course, University starts in September... when should they sit the exam to tie in with Uni start times and what should be in the exam?

3 32

AL @alistair_lawson · 3h
Using your argument that they haven't been taught for 6 months they are not ready for university. They need to complete the learning at their current level, attain the requisite grades then if successful proceed to university.

4 2

Marie Bardsley @MarieBard · 10m

In the main, healthy school pupils are not vulnerable to this virus, in the sense it rarely makes them ill & almost never so seriously ill that their lives are in danger. Very soon, their risks of dying from 'flu will exceed that for covid19 if it hasn't already crossed over.

Replying to @pdick10 @BBCFergusWalsh @imperialcollege

Unfortunately, the so-called cases, if obtained by large scale testing in the community of people who are well, are almost all false positives. This is inevitable when using a test with a false positive rate greater than the actual prevalence of the virus.

I think you're being asked, and I wonder this too, is using seroprevalence to estimate IFR doomed to overestimate IFR, because not every infection leads to antibodies in the detectable range. I'm sure that is true, so I see IFR estimated that way as 'IFRmax'.

Math @inlandtaipan1 · 15h
Very poignant indeed. Evidence pointing in one direction. However, if you guys are saying this, why aren't the SAGE advisers saying the same to Government! I assume SAGE still believe a second large scale wave of infections is possible with a major impact on hospitals.

I believe you're right, as the NHS is not even close to normalising, while almost empty of Covid19 cases and many other disorders. But, and willing to learn here, I'm not aware of the principle or driving force that makes 2nd waves possible let alone likely. Can anyone advise?

I too am struggling with the data, as don't fit the notion that there is a low HIT (due to prior resistance & other factors) & that it's been reached. A range of % infected would suffice, but 6% is way too low to 'fit' (my own calculation was around 28%, so 4.5x out).

That said, the near identical daily deaths vs date profiles between countries cannot have resulted from the different & aggregated human interventions. There's a natural process of equilibrium at work here, of that I'm quite sure, and I know I'm not alone in that belief.

A range of possibilities: 1. Only 6% have been infected. Then I believe the HIT is at the lower bound of papers by Gupta & Gomez. 2. Seroprevalence underestimates prior infections. This seems highly likely. The assay has avoidance of false positives as an absolute requirement.

1 1

Groo The Wonderer @groo_wonderer · 56m
This is very important. The say 50% of us that already have T cell immunity may get a mild cold when exposed to COVID, and not develop antibodies. Someone should do the math because I think this drops IFR to way below seasonal influenza.

I've seen estimates ranging 30% to 50% in CoV-2 naive subjects, rising to almost 90% in recovered, confirmed cases. That change suggests it's very important. I'm sure also that some responses result in little to no circulating Ab, I just don't know what typifies this outcome.

Incorrect. The number of U.K. deaths with or from covid19 are about ten (10) per day.
I'm guessing that you've no idea how many people die daily of other causes? It's about 1,500.
COVID-19 is now an extremely unlikely way to die in U.K. No longer in the top 10 leading causes.

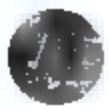
NotJaneDueker @ES03784893 · 5h
Sweden is #8 in global deaths per 100k population.

3 6

Denis Sorn @DenisS0rn · 2h
For some reason they too have used rigged guidelines to stamp covid on death cert. Prob 'euthanized' old ppl too. Though even w/these rigged numbers& ignoring other 7countries that did lockdown, what does this prove? Correlation != causation.



1

NotJaneDueker @ES03784893 · 2h
Dude, you do get this is deaths per 100k population, right?...and they've only just now reached 15% per anti-body testing after being stuck at 6% for months.

The whole "herd immunity" effort for them is a massive #Fail.

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @ES03784893 @DenisS0rn and 3 others

Modelling by Gupta & Gomez indicates that 15% is the lower bound of potential herd immunity thresholds. I think they're far above 15% infection, as by no means all who survived infection produce antibodies. No plausible alternative force than HIT to explain the pandemic ending.

2

Denis Sorn @DenisS0rn · 1h
There are no more excess deaths in Sweden, anti-body testing& nr of 'cases' is almost irrelevant in the context. Partial and cross immunity also exist, memory T cells, and % of immune people required for herd (full) immunity depends on various factors.

1

NotJaneDueker @ES03784893 · 46m
Death, Dude. Not cases.

#8 in deaths per 100k population.

And you got nuthin', no numbers, on your other "immunities" to make any factual claims.

Sweden now suck at 15% positves based on anti-body testig. A sad fact backed up with numbers.

2

Yardley Yeadon

2

Denis Sorn @DenisS0rn · 44m

AB tests have nothing to do w/'positives' that's cases. Not sure why repeating your self. Nr or cases is mentioned in the context of current casedemic situation. No excess or covid deaths in Sweden any more. 15% antibodies plus partial immunity seem to be enough for herd immunity

1 1

NotJaneDueker @ES03784893 · 37m

15% positives FOR anti-bodies, Dude.

So, you declare Sweden has reached "herd immunity" with that sorry- assed number?

You & they have a suprise coming.

This is a "novel" virus. Remember that.

😂😂😂

That still won't help, not unless they vaccinate the entire nation. That would be wholly unethical & probably illegal. It would result in harms coming to an unknown no of people who gain no benefit. After WW2, we made such actions illegal as a kind of anti-Mengele law.

David Steadson @DavidSteadson · 3h

(1) NZ has already opened up to cook islands. As has happened in Europe, countries open up to other countries once the infection rate is controllable

(2) We already have viable vaccines, several undergoing final testing for side effects

Given we had one for SARS this was likely

1

Yardley Yeadon

@MichaelYeadon3

Would you support mandatory vaccination of the whole population of NZ?
How would you persuade those not at risk from the virus to accept an intervention who's safety has not been fully evaluated, some of whom will almost certainly be seriously harmed by it?

I can't & no one can, yet. I don't think any serious scientist believes "it woz lockdown wot dun it".
On a serious note, I think we'll find that key differentiators will be intensity of initial infection; extent of prior immunity; mortality in the prior 2 flu seasons mostly.

A whole TWO! That's shocking. How many people die each day ordinarily in Sweden? Around 250?

NZ has had a positivity rate of < 0.1 % over weeks now. So tests are unlikely to deliver false-positive. I'd say: When a country has a positive-Rate > 0.1 % it's irrational to even guess that a significant part is false-positive.

1

Calimero @Kalle75291704 · 4h
There are a few 100 different tests on the world, even in Germany more than 50 different tests are used from the independing laboratories. Results from one country can not be transferred to ask countries.

2 1

Andreas Prucha @AndreasPrucha · 2h
Right. But assuming that others use great tests and the own countries labs are just bad and use really bad tests is also a bit strange. And even Germany was already down at 0.5 % positivity rate (so false positive cannot be > 0.5 % and is very likely way below - near 0.01 %)

According to UKs science committee on the virus, they believe the operational false positive rate of the PCR test is around 2% (which renders it useless for massed screening once virus prevalence falls to where it is now. Most (75%) positives are false & might be all recent wks.

Yes, I've never been much of a fan of shopping as a kind of entertainment the way my wife does it.
In my case, adding a slightly unpleasant obligation won't prompt me to shop with a mask on, but instead simply to avoid terrestrial shipping as much as is feasible.
I'm not alone.

When making a decision on school closure you need to look on the overall risk.

It is low.

1 1

David Steadson @DavidSteadson · 2h
Not closing schools is probably the single biggest difference between Sweden and Norway and Finland NPI so I don't think that is necessarily accurate. Too much of the reporting is based on very poor science.

I wonder, if young children are sufficiently poor transmitters of the virus, including many of them in the chain of potential transmission might actually reduce R?
The analogy would be akin to having reduced the fraction of the population remaining to get & transmit the virus.

In the method doc. they make the reasonable point that specificity must at least equal the % of negative test results (99.95% + on latest numbers). But if specificity is only 0.01% better, then the remaining 0.04% could still be false positives, FP - i.e. a 4:1 ratio of FP to TP.

1

EyesOnThePrize @EyesOnThePriz12 · 4m
Problem is, it's impossible to know...

Also of note - this, buried in the survey doc: "During these (6) weeks, 53 individuals from 53 households tested positive".

Reads as no multi-"case" households. But we're told virus largely being transmitted at home? Makes no sense.

Replying to @EyesOnThePriz12 @d_spiegel

Yes, if we were seeing clusters, that's more likely to be real. By the same token, if all the 'cases' are isolated, while it doesn't tell us for sure either way, but it's consistent with the false positive concern.

The real point is, none of the testing statistics are worth a damn because they're not underpinned by any sensible strategy or methodology.

In the absence of anything meaningful from the @ONS or @phe_uk we should *only* be discussing hospital admissions and deaths.

Indeed, as I believe others have said, with low prevalence & the assay as it is, it's dangerous to be using it.
Worse, we & other countries appear to be driving lockdown & quarantine policy off the data.

They could be - either random errors or 'dead' viral fragments.

Or the virus could be spreading amongst people with vaying levels of immunity.

Either way, "no issue".

1 1

Yardley Yeadon @MichaelYeadon3 · 46m

Agreed, all are possible & maybe all at once. I lean against the last as a major contributor to the signal for one reason, which yells "error!" to me. It's that the % of tests which are positive, which has fallen steadily from 30% months ago to 0.5% now, has stopped falling.

result the article seems to discuss is more to do with which groups tested positive the most. I'm dubious of testing, but will look at paper. Have you had more thoughts?

1

Yardley Yeadon @MichaelYeadon3 · 13h

Thanks, not yet, other than I don't believe that low seroprevalence necessarily means that no kind of herd immunity is involved in the attenuation of the pandemic. I freely admit I was dashed by the earliest seroprevalence data months ago. I haven't integrated it in my schema yet

1

Ruminator Dan @RuminatorDan · 12h

I've flipped through the paper. It seems to me primarily concerned with the issue of disproportionately affected groups; so more looking at the differences in seroprevalence levels than studying their absolute meaning. Couldn't make sense of that numbers issue either. There 1/n

1

Ruminator Dan @RuminatorDan · 12h

2/n are tables containing those figures but I didn't spot how the classifications might relate to each other. Happy to discuss thoughts on antibody testing, seroprevalence, herd immunity levels, but will stop this thread here so it relates solely to that paper.
...end.

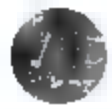
seriously, just stop. innocent kid riding a bike being targeted by a thug is absolutely nowhere in the same ballpark as someone getting shot while standing with her drug dealing boyfriend who is SHOOTING AT POLICE.

what should the police have done?

3 12

notankyou @notankyou2 · Aug 12
Her boyfriend had NO prior drug arrests, and I've seen no evidence by the police that he was a drug dealer. Stop that narrative, please, unless you have evidence.

2



Yardley Yeadon @MichaelYeadon3 · Aug 12
Most people in their right mind even consider aiming a firearm at an armed official. You're almost certain to die & in the exchange, anyone near you in your foolish choice is likely to be injured if not killed.

2 1

notankyou @notankyou2 · Aug 12
Not sure how that speaks to what I said. Seems like you just ignored my correction and moved on.

Chatted to my clever daughter re the 53 separate households. She observed that unless households were screened then all tests will be in single members of a household. I don't know how the sample was selected, but she's prob correct. TTI doesn't yield a f/up test, just isolation.

Prevalence is TOO LOW even for ONS to measure it with any confidence. The fact they claim it's unchanged in 3.5months is not faintly plausible, imo. I think it's much lower, possibly near-zero. Given weak benefit if any of masks, it's nuts to have mandated them. All that has..

Simon Dolan #KBF @simondolan · 20m
Everything that has been done to this country over the last 5 months was sold to you on the basis of 'the greater good' - protect others, protect the NHS etc

It sounds nice, but as you can see, the effects are devastating.

24 113 322

Yardley Yeadon @MichaelYeadon3 · 5m
Among other things, though small, masks are a talismanic example of sheer lack of perspective from our leaders. Further, masks as used don't work. God help us if we'd had to rely on them. But consider this: virus prevalence fell to 1:1500 or 1:2500 range by end April w/out masks.

1

Yardley Yeadon @MichaelYeadon3 · 3m

jack mullion @jackmullion · 15h
It means all resources are focused on improving education for everyone. A vested interest in maintaining the status quo by an elite, and a minor-elite aping to be like them, is reduced; raising standards for all becomes possible.

1 1

Cathy @SaltyDuchess · 15h
But state resources ARE focused on improving education for state pupils.

Private schools don't take resources from state, they actually save them money.

Taking over private schools will just mean those state funds are even more stretched

1 8

jack mullion @jackmullion · 15h
My argument is for a system where all pupils are educated to a high standard where merit counts for more than an old boys network. Whilst an old boys network exists, there is per se from it, a need to have a poorly educated underclass.

1

Cathy @SaltyDuchess · 15h
I get that, but what you haven't done is shown how abolishing private schools in the UK would achieve that?

I don't think it will, if you do show me exactly how?

There's some interesting reading re. the ONS Infection survey here:

ons.gov.uk/peoplepopulati...

and here:

ons.gov.uk/peoplepopulati...

3 4

EyesOnThePrize @EyesOnThePriz12 · 3h
In the method doc. they make the reasonable point that specificity must at least equal the % of negative test results (99.95% + on latest numbers). But if specificity is only 0.01% better, then the remaining 0.04% could still be false positives, FP - i.e. a 4:1 ratio of FP to TP.

2

Sara Haboubi MA, B.Sc. (engineering)) @SaraHaboubi1 · 9m
All part of the greater plan. Anyone else feel though that either they backed the wrong virus (wasn't as bad as they expected it to be - didn't bank on T cells or healthy people being basically immune) or that a more powerful and dangerous one is yet to come..ie '2nd wave'?

1 1

Yardley Yeadon
@MichaelYeadon3

With arrivals from France and others under quarantine there will soon be hundreds of thousands of people unable to leave their homes.

Even the worst hit areas here have more freedom.

A solo walk for 10 minutes should be allowed. Be fair and people will behave.

261 190 2.4K

Andrea @Andrea91932426 · 10h

Professor my father was diagnosed with pancreatic cancer on wednesday. The NHS said there is nothing they can do for him. Because we were unable to pick him up from because he needed help as he can not walk anymore they sent him home in a taxi with no help to get out at home.

4 4

Yardley Yeadon @MichaelYeadon3 · 5h

Andrea, this is terrible & as a dad with young adult daughter, I can't imagine how awful this all is. Shitty treatment, too.
May I ask, without meaning to be intrusive, do you think in normal times, the medics would have tried emergency treatments? I'm wondering if they've tried.

2

Andrea @Andrea91932426 · 33m

We're not allowed visits and we could never get hold of doctors to speak to us on phone we were ignored we could never find out what was going on with my dad.

Masks work great here in korean. Open for business

13 2 6

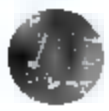
OnePerspective @OnePerspective6 · Aug 13
Steve, do most Koreans wear masks? We all know Asian countries have been wearing masks for some years now. I wonder what the numbers look like compared to non-mask wearing countries. Anyone know?

7 1 5



Andrew McCourt @AndyMcCourt32 · Aug 13
In Sweden nobody wears a mask and they have almost no new cases.

In Spain, they're mandatory everywhere outside your house and they're averaging thousands of new cases a day.

The masks are of little to no value whatsoever.

1 1

Andrew McCourt @AndyMcCourt32 · 11m

The mask decision is political and nothing more. There is no conclusive evidence to support their efficacy and there's now an outright refusal to acknowledge the role that improper mask usage has in increasing risk to the wearer.

It's a scandal.

Agree completely. Statistically & perhaps in reality, some vulnerable people are going to get pulmonary infections they might otherwise not. That's what happened to the face cloth group in that large study in Vietnam: twice the rate of influenza like illness, lab confirmed.

This is an error, because we don't have a spike. One of our most eminent & assiduous epidemiologists has looked at this & concluded that most of the 'cases' are very likely to be false positives, because the prevalence of virus is less than the false positive rate of the test.

Replying to @EssexPR

ONS have separately admitted that almost all the positive PCR tests over the last six weeks could as easily be false positives as real positives. The true prevalence of the virus in the population is much lower than the false positive rate in the test. Minimum 75% false positive.

#fearmongering. The 80+ & immune compromised can.

41 1 30

lisa macintyre @lima59 · Jun 27
Jfc. Learn how herd immunity works. Hint. You need a large population that is immune to protect those that are not. LARGE populatins of vaccinated people for example provide herd immunity to those who can't get vaccinsted.

2 2

Laura Thoman @laura_thoman · Jun 27
Great point & the most "humane" way for herd immunity to spread is for the young (since they aren't the ones dying from the disease, statistically speaking) to be exposed. Most aren't aware they're even infected & the few that need care have it available for them. This is a win.

1 1

lisa macintyre @lima59 · Jun 27
Except...there is no proof you are immune after getting this virus. In fact, some are getting it again. So no...exposure is not providing hetd immunity.

2 2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @lima59 @laura_thoman @GovRonDeSantis

I'm not sure there's has been even a single case where we're certain someone has been infected twice. Unless immunity post infection lasts at least 6-8mo, I would expect a sizeable fraction of today's cases to be second timers. That this isn't true speaks strongly for immunity.

Sceptic :)
I look forward to your humble acceptance that you're wasting your time with masks, because they don't inhibit transmission of respiratory viruses. It's not surprising because although they're lung-tropic, transmission isn't by aerosol, but oral.

PM Johnson announced further easing of lockdown restrictions in England – with indoor theatres, beauty salons, spas and casinos being allowed to reopen from 15 August.

The gov has doubled fines to a maximum of £3,200 for those who "repeatedly flout face covering rules".

It's not difficult to understand as they're not vulnerable in the unlikely event they catch it. Of course Govt won't say this, but it's a Good Thing them getting it. They won't get ill & all evidence is they'll be transmission blockers afterwards.

Despite the claims for an outbreak of covid19 in France, where an upturn in 'cases' began 6w ago, daily deaths are falling & falling with no reversions. Decide for yourself, but my assumption is this is mostly an artefact of over-testing. Hard to find the day by day # of tests.

1:38 AM - 15 Aug 2020

1

Yardley Yeadon @MichaelYeadon3 · 1m

Does anyone have access to the time series of # tests per day in France?
For quick access to graphs, pls search "marseille covid stats" (the return is for all France).

Govt is paying people to get tested. See below. That's astonishing. If a household of four agrees to this, they'll make £1500 tax free.
Also, the PCR test is utterly unsuited to this vigilance role. It already gives far more false positives than genuine positives.

Para @ParasiteControl
Replying to @RealDeniseWelch

My nephew was feeling under the weather one day. You know the kind - I fancy a day off work - kind. His mum made him get tested because she works in a care home. He tested positive. The authorities are targeting poor areas for testing, offering money…

a voucher for each visit (£50 for the first visit, £25 for each further visit).

Thank you for your time.

14 19 32

Kevin steele @Kevsteele32 · 3h

What makes you think they're targeting poorer areas? This is just ONS doing a survey of random people. If they don't offer an incentive they don't get as many responses and it ends up not being so random

3 1

Para @ParasiteControl · 3h

The areas they've locked down are high unemployment areas. Why need to offer a monetary incentive, if people are ill, they will get tested. They don't need hunting down or bribed.

1 2 2

Kevin steele @Kevsteele32 · 3h

The letter above is nothing to do with locked down areas. It's from ONS who do a weekly survey of random people to try and calculate prevalence of the virus in the population

2 1

Yardley Yeadon

@MichaelYeadon3

Follow

Replying to @Kevsteele32 @ParasiteControl @RealDeniseWelch

I accept that was its original purpose. But it is known beyond doubt its unsuitable. It has a false positive rate far higher that the actual prevalence rate of the virus. Mass testing should be abandoned. It can do nothing but harm.

I want to attend but I won't stand under that bunch of chuff. You'll all be labelled as wingnutd & you'll drive away normal, well informed & cross people like me. The data is clear: lockdowns are ineffective & so are masks. I'll march with other scientists/medics for that.

And the people who are incredibly sick from covid 19 in the UK right now get stats from THEIR doctors and real life experience.

when did I say it wasn't being delayed?

1

GazP77 @GazP77 · 2h
It's about the number of people sick and is that justification for ruining the economy and the fallout from lockdown. More people over the last 7 weeks have died of flu than covid.

1 1

jordyn @6jor6dyn6 · 2h
that's literally not true. provide your sources for that.

human life > the economy

2

Yardley Yeadon
@MichaelYeadon3
Follow

Replying to @6jor6dyn6 @GazP77 and 2 others

Australia has trashed its economy costing tens of thousands of businesses & 1/3rd trillion quid. They've had 360 Covid deaths. How many non Covid deaths? Many thousands. It's utterly pointless as lockdowns don't help but they kill the economy.

I've been asked if someone can be properly infected by covid19 twice. I'm aware there was a concern months ago that they'd seen some but that went quiet. We know PCR can be positive long after anyone's successfully cultured the virus. Interested to see if the science has evolved.

> **Yardley Yeadon** @MichaelYeadon3
> Replying to @lima59 @laura_thoman @GovRonDeSantis
>
> I'm not sure there's has been even a single case where we're certain someone has been infected twice. Unless immunity post infection lasts at least 6-8mo, I would expect a sizeable fraction of today's cases to be second timers. That this isn't true speaks strongly for immunity.

Replying to @hartl73516271 @RandomG3y and 3 others

No, there's some poor correlations which people have used to claim causation. They ignore all the data which speaks against the idea. That is not the scientific method which if done carefully takes no prisoners & gives answers. The only large scale RCT shows they don't work.

No, that definition belongs to someone who requires others to do things they all know don't help. The masks data is solid & negative. Some small study with a trend on it doesn't trump a large negative RCT.

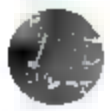
Govt is paying people to get tested. See below. That's astonishing. If a household of four agrees to this, they'll make £1500 tax free.
Also, the PCR test is utterly unsuited to this vigilance role. It already gives far more false positives than genuine positives.



Para @ParasiteControl

Replying to @RealDeniseWelch

My nephew was feeling under the weather one day. You know the kind - I fancy a day off work - kind. His mum made him get tested because she works in a care home. He tested positive. The authorities are targeting poor…

PCR is often positive long after the ability to culture virus from airway secretions has halted. In no case longer than symptoms start to +8 days had anyone shown viable virus, but PCR positives seem out for many weeks.

PCR can give false positives if overrun, being an amplification technique. Even in this pandemic, the inverse relationship between number of cycles to give a result & likelihood of being able to culture virus from sample. False positive rate unknown but 0.25-2% is assumed.

Interesting you ask, since even in hospitals, the rather surprising results of numerous studies over many decades show they don't even reduce the rate of surgical wound infection. Some unusual surgeons ran a head to head & no mask had fewer infections. I'll see if I can find it.

empirically shown. ucsf.edu/news/2020/06/4...

A recent study published in *Health Affairs*, for example, compared the COVID-19 growth rate before and after mask mandates in 15 states and the District of Columbia. It found that mask mandates led to a slowdown in daily COVID-19 growth rate, which became more apparent over time. The first five days after a mandate, the daily growth rate slowed by 0.9 percentage-points compared to the five days prior to the mandate; at three weeks, the daily growth rate had slowed by 2 percentage-points.

Another study looked at coronavirus deaths across 198 countries and found that those with cultural norms or government policies favoring mask-wearing had lower death rates.

Two compelling case reports also suggest that masks can prevent transmission in high-risk scenarios, said Chin-Hong and Rutherford. In one case, a man flew from China to Toronto and subsequently tested positive for COVID-19. He had a dry cough and wore a mask on the flight, and all 25 people closest to him on the flight tested negative for COVID-19. In another case, in late May, two hair stylists in Missouri had close contact with 140 clients while sick with COVID-19. Everyone wore a mask and none of the clients tested positive.

Oddly enough, the wearing of masks in surgical theatre is a historical courtesy to patients. They don't reduce rates of infection in surgical wounds.

And it helped them not a bit in their recent terrible flu season which was the worst in many years. If something is correct, it won't fall over with the slightest puff of wind. Which the evidence for masks & transmission does. Poof! Over it goes.

1

Caleb Sutherland @CalebSuthrland · 29m

Do you ever wonder why doctors and nurses wear them at work? Or that scientist and health professions suggest they work?

1

Yardley Yeadon @MichaelYeadon3 · 24m

Interesting you ask, since even in hospitals, the rather surprising results of numerous studies over many decades show they don't even reduce the rate of surgical wound infection. Some unusual surgeons ran a head to head & no mask had fewer infections. I'll see if I can find it.

1

Caleb Sutherland @CalebSuthrland · 22m

Welp my mom is a doctor, so I think I'll stick to her intelligent fact than your opinion. Sorry I prefer people who actually went to school on what they're talking about. People who are just intelligent in general survive longer anyways

It's not my opinion. I, too, am surprised by the findings, having a PhD in pharmacology & 35y in R&D. Shows it's worth checking assumptions sometimes.

A recent study published in *Health Affairs*, for example, compared the COVID-19 growth rate before and after mask mandates in 15 states and the District of Columbia. It found that mask mandates led to a slowdown in daily COVID-19 growth rate, which became more apparent over time. The first five days after a mandate, the daily growth rate slowed by 0.9 percentage-points compared to the five days prior to the mandate; at three weeks, the daily growth rate had slowed by 2 percentage-points.

Another study looked at coronavirus deaths across 198 countries and found that those with cultural norms or government policies favoring mask-wearing had lower death rates.

Two compelling case reports also suggest that masks can prevent transmission in high-risk scenarios, said Chin-Hong and Rutherford. In one case, a man flew from China to Toronto and subsequently tested positive for COVID-19. He had a dry cough and wore a mask on the flight, and all 25 people closest to him on the flight tested negative for COVID-19. In another case, in late May, two hair stylists in Missouri had close contact with 140 clients while sick with COVID-19. Everyone wore a mask and none of the clients tested positive.

May I respectfully enquire: has the testimony of two former heads of the RCS altered your opinion?
If not, I'm genuinely interested in why it was unpersuasive.

Unfortunately the test in question is the PCR test, I think?
I think there could be great utility in the antibody test, but testing for a low prevalence virus with a high false positive rate is seriously dangerous. It's use led to quarantining on return from France.

I decided the only way I can deal with all this flimflam without going bonkers is to just laugh in the face of it all. Walking into shops bold as brass without a mask etc. The only way to beat this is non-compliance. I can only play my small part.

13 21 210

Scott Petricig @paritybit36 · 7h
Fun to see that "covidiots" aren't only in the US. Grow a pair and wear a fucking mask.

2

James Lahey @FormerType2 · 7h
Request denied.

1

Scott Petricig @paritybit36 · 6h
Ah, so you're ok with being murderer. Ok.

1

James Lahey @FormerType2 · 4h
That's a new one. I'll add it to the list along with "if you hate masks you'll love a ventilator" and that other timeless classic "do you wear a seatbelt?"

1 1 3

Scott Petricig @paritybit36 · 3h
They're all legitimate. How about "do you wear clothes in public?"

Sadly for the politicians, the virus is following its course, completely independent of Government political policies, or their ""Science"". Only when this is acknowledged, and independent scientists put in charge, will there be any chance of a successful COVID-19 pandemic exit.

Those who've studied this episode in UK & compared the time profiles, key events & emerged science over the last 6mo knows with decent confidence that a 2nd spike is less likely than a large meteor strike, though the awful testing strategy could easily generate an apparent spike.

Clarification.
Maintaining the fiction right now, August 16th 2020, that we have an o/g pandemic is what I call fakedemic.
This is because all important indicators are now <1% of peak & have been falling continuously since mid-April.
I don't mean tens of thousands didn't die.

him, like all illusionist's he has to keep some things secret so we don't know which way he will be coming at us, basically whether we like him or not he knows his job, credit were it's due

1 11

Steven Gray @piping_chemist · 29m

Have you ever read a Spectator article?

1 4

Johan van Roekel @johanvanroekel · 17m

his spectator articles are opinion pieces. In @afneil case, I would not call his opinions right wing anyway. But the important point is, that he does not let his opinion guide his professional interviewing style. and that is the difference between opinion and bias.

1 2

Steven Gray @piping_chemist · 13m

I don't disagree with that. I'm just pointing out that as the Spectator is uncategorically right wing, I find it difficult to believe that Mr Neil would have drastically different personal views.

Sadly for the politicians, the virus is following its course, completely independent of Government political policies, or their ""Science"". Only when this is acknowledged, and independent scientists put in charge, will there be any chance of a successful COVID-19 pandemic exit.

Governors are forcing people to wear masks, based on CDC guidelines. COVID kills about 0.02% of those who get it. How many does obesity kill? When the Gov't starts enforcing USDA and NIH dietary and exercise guidelines with police powers, will you comply? It's science.

Tish Durkin @tishdurkin · 10h
Is this a real argument? Obesity, serious as it is, is not contagious. Whether I gain or lose 10, 50 or 200 lbs, my weight does not harm the person next to me, and the fact of 10 obese people today does not guarantee multiples of that tomorrow.

2

Bharani Padmanabhan MD PhD @scleroplex · 9h
The only question before you is:

Will you comply with a future gubernatorial order regarding obesity regulations?

2

Tish Durkin @tishdurkin · 9h
If my becoming obese is causing my neighbors to become obese in an atmosphere where obesity has suddenly sprung up in 5 million Americans who never had it before and has killed 165,000 of them in six months: yes.

2 1

Yardley Yeadon
@MichaelYeadon3
Follow

Replying to @tishdurkin @scleroplex @bmarcois

There's a different but as strong an argument for your theoretical obesity harming others, not through contagion, but through drawing excessively on any budget limited, publicly funded provision including healthcare.
I'm in U.K., so that argument might not fly in the US.

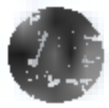
Hi Ivor, I've only just discovered you, but I'm glad that I did!
Just quickly, if u know:
1. Can PCR give inaccurate results by mistaking one virus for another on account of small amounts of RNA being used to multiply for examination?
2. Has SARS covid2 been isolated - properly?

3 1



Yardley Yeadon @MichaelYeadon3 · 18h
PCR can give false positives if overrun, being an amplification technique. Even in this pandemic, the inverse relationship between number of cycles to give a result & likelihood of being able to culture virus from sample. False positive rate unknown but 0.25-2% is assumed.

Ian Bradbury @IanBradbury17 · 3h
Look at test positive rates. The false positive rate cannot be as high as 1%. If you want to worry about the test, worry about long turnaround, low sensitivity, and the difficulty of swabbing. Those things need fixed. An FPR of maybe 0.001% is utterly irrelevant.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @IanBradbury17 @HMellerick and 2 others

Prof Carl Heneghan has published this in several places including his Oxford unit, CEBM. spectator.co.uk/article/how-ma ...
My concerns are valid. The FPR could be as high as 2.3% according to U.K. ONS, though prob lower. Prevalence of virus <0.1% is a serious issue, positives 75% FP.

With each comment you make a bigger twat of yourself. You can't name a medical organisation or find a peer reviewed study. You're not even a good conspiracy theorist.

1

Random Guy @RandomG3y · 37m

Lets see your peer reviewed studies that show how effective masks are. Right now just by looking at countries that made wearing them mandatory (like Spain), you can see they're not very effective.

Ps. National Institute of Hygiene and Epidemiology, Hanoi, Vietnam is one.

ncbi.nlm.nih.gov/pmc/articles/P …

This is the only large RCT of masks & respiratory virus transmission.
The results are unequivocal & provide no support whatsoever for the idea that mask wearing 'works'Mr Random, you'll be better able to influence people if you remain courteous!

rate, now back to where it was two months ago.

1 6

Yardley Yeadon @MichaelYeadon3 · 19h

Simply not true. What has happened is much more testing, though you'll note they no longer disclose the number of daily tests. Showing you just the count of positives is scientific fraud of the 1st water. Same in France. The only spike is in # of tests. 75% are false positives.

1

Baxter Tocher @btocher · 19h

It's definitely England, though. PHE have no remit in Scotland.

1 2

Yardley Yeadon @MichaelYeadon3 · 19h

Yes, agree with you there!
On the uselessness of the testing going on, check tweets from CEBM (centre for evidence based medicine) where some very smart cookies coolly review all the data & issue unimpeachable analyses. You may have seen Prof Carl Heneghan on TV?

1

Baxter Tocher @btocher · 18h

Haven't, I'm afraid. Gave up watching any news or current affairs on TV a few years ago. But thanks for heads up. Will google.

Great insight here into @BBCFergusWalsh's mindset. This has been his career highlight.

He's an English Lit graduate. Not clear he has any science qualifications at all, let alone medical. Yet he's BBC medical correspondent.

I couldn't watch it all. He is so lightweight that I find him very dull. Shocking he's had no competition as BBC's presumed lead 'Medical Correspondent'. What contempt the broadcaster has that it wouldn't even hire a qualified person to cover such matters. Awful, awful.

Hugh Mellerick @HMellerick · Aug 12
Hi Ivor, I've only just discovered you, but I'm glad that I did!
Just quickly, if u know:
1. Can PCR give inaccurate results by mistaking one virus for another on account of small amounts of RNA being used to multiply for examination?
2. Has SARS covid2 been isolated - properly?

3 1

Yardley Yeadon @MichaelYeadon3 · 23h
PCR can give false positives if overrun, being an amplification technique. Even in this pandemic, the inverse relationship between number of cycles to give a result & likelihood of being able to culture virus from sample. False positive rate unknown but 0.25-2% is assumed.

1

Ian Bradbury @IanBradbury17 · 8h
Look at test positive rates. The false positive rate cannot be as high as 1%. If you want to worry about the test, worry about long turnaround, low sensitivity, and the difficulty of swabbing. Those things need fixed. An FPR of maybe 0.001% is utterly irrelevant.

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @IanBradbury17 @HMellerick and 2 others

According to Prof Carl Heneghan of the Oxford Centre for Evidence Based Medicine, the FPR is at least 0.1% where the prevalence of the virus is less than that. It's a very poor test in those circumstances & most positive results are false positives.

events & emerged science over the last 6mo knows with decent confidence that a 2nd spike is less likely than a large meteor strike, though the awful testing strategy could easily generate an apparent spike.

1 3

Bemused Backpacker @bemusedbackpack · 7h
A spike in 'cases', not hospitalisations, severe symptomatic cases or deaths of course. Funny how they always leave that bit out.

1 1

Yardley Yeadon @MichaelYeadon3 · 6h
Why don't the reporters return to their earlier scare stories like Leicester in England & tell the public that "Although we reported on an apparent spike six weeks ago, hospitalisations & deaths didn't ever rise. We're now considering whether the testing strategy is appropriate".

liz coombes @lacoombes · 20m
Because they would have to admit it's all meaningless now!

1 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @lacoombes @bemusedbackpack @christopherhope

I think they would have to. So better for their profile that we're left in the dark, thinking that there was a spike in Leicester.
There was not. It was all an artefact of a poor testing strategy.
That serious, built-in flaw remains in the testing today, which is truly appalling.

...numbers of avoidable deaths is thought to be ramping at 2,000 people per week. This will likely continue until the NHS is normalised. And when will that be? No one has a clue. And now it's holidays.

This is very interesting. As someone with complete & permanent detrusor failure secondary to decades long undiagnosed PBNO, I'm always interested in urinalysis. I recognised the acidification but saw the answer before working it out. What kind of mask does it take to do that?

Dated but missed. “National coordinator of UK’s testing effort Professor John Newton said mandatory vaccinations are an option”. No, John, they aren’t. It’s illegal as part of the postwar settlement to require anyone to assume risks yet derive no med benefit. See you in court.

Had a chat today with my longest pal. We did our PhDs together in the 80s. I had a career in biomedical R&D, latterly founding a U.K. biotech. My friend has a largely academic career & is now a professor of immunology at a minor U.K. Uni. Credentials aside. He's been speaking...

34 350 445

Alan @Alanthegoafer · 2h

I think a great many can say we knew this anyway, (the various data told me that), but, it is great to hear it from someone who actually knows their stuff.

It wont end until we are vaccinated. And I am convinced it will be mandatory.

6 4 34

Wildflowers @WildFTweeting · 31m

It doesn't need to be mandatory - restricting access to services and the like to those who have not had it will have the same effect. No jab = no flights, employers/insurers demanding it, etc. See how it works... .

1

Yardley Yeadon

Replying to @WildFTweeting @Alanthegoafer

I understand, but a 1st year law student can easily build the case that in practise it's still mandatory & illegal.

Surely Neil Ferguson is totally discredited now....why does anyone listen to anything he has to say?

I think the British public get the sense themselves that the pandemic is over but, the 'Japanese soldier in the jungle' mindset will persevere amongst many for a while yet.

3 5 24

offshorebella @offshorebella · 11m

I have neighbours who haven't been out since lockdown. Healthy, young people. They must be living on beans and rice. They never shop. Occasionally a takeaway turns up. They will be Vit D deficient for sure. How many like this?

There is a comment here how they had backed this pandemic. The epidemiologists, big pharma, public health etc had been banking on a pandemic and they backed this one early on thinking it would be the one! But it isn't and they are now trying to make it the one!

Continuing to use in surveillance a PCR test with a higher false positive rate than the prevalence of the virus is guaranteed to create a local 'spike' in cases upon demand. Notice they never tell you the # of tests per day anymore? I think it's 130,000/d & someone's coining it.

Here's my fear: by mass testing the not-ill, the unfit for purpose PCR test will throw up enough positives, mostly false, to use as input to Ferguson's model of wrongness and as output, we'll see R way above 1.0 (at present, it's 0.2, he said 10 days ago). IGNORE such claims.

This is the most important question I've heard. By the time the initial 3wk lockdown was extended, I grew VERY agitated as even then, it was known to be ineffective & I know Govt knew it, too. It was then I 1st felt fear. I have no idea why many countries are killing themselves.

Gav_5355 @Gav_5355

Replying to @MichaelYeadon3

So why are pro lockdown govt's keeping the fear alive, bringing in facemasks etc? A charade to try and justify their disproportionate actions which has caused such devastation? Or to keep demand high for a vaccine they have already sunk ridiculous amounts of cash into??

This ONS data incorporates the redefined definition of covid19 death & you'll note that now, there really aren't any. It's <1% of all causes mortality. Virus prevalence is too low to accurately measure. It is over.

Frog Escalator @frog_escalator

Replying to @MichaelYeadon3

ONS data would also bear out that it's over!
It began AFTER the start of lockdown though!

Vaccine investments are tiddler change, a few billion. Australia has already lost $370 BILLION and they've had few deaths. I've no idea why the fake quarantines, latterly from France. They too have manufactured spikes out of false positives in PCR, but deaths continue to fall.

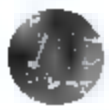
Surely Neil Ferguson is totally discredited now....why does anyone listen to anything he has to say?

I think the British public get the sense themselves that the pandemic is over but, the 'Japanese soldier in the jungle' mindset will persevere amongst many for a while yet.

3 16 79



Yardley Yeadon @MichaelYeadon3 · 2h
I can't be sure but it sounds like Prof Pantsdown might technically be out of SAGE, but he might still contribute as 'guest' from time to time. He might still be fully i/c of modelling. If so, as a professional biologist, I dislike his self styled title, 'mathematical biologist'.

1 3 17

Emily Petro @EmilyPetro22 · 44m
If the officially "kicked him out", they would have to say "why". Since he was the one who started all of this, that would look pretty terrible in the eyes of the public...no?

1 2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @EmilyPetro22 @MauriceHeard5

It cannot be Prof Ferguson alone & in any case, he's neither bright enough nor broad enough to have had the political influence implied.
He's a very influential, technical 'wonk', as Hunanities grads see everyone who can reason.

This makes massive sense, some scientists who have been predicting a massive viral disaster for years are obviously in their element over this, but it isn't the "big one" its a warning but not the end of life as we know it.

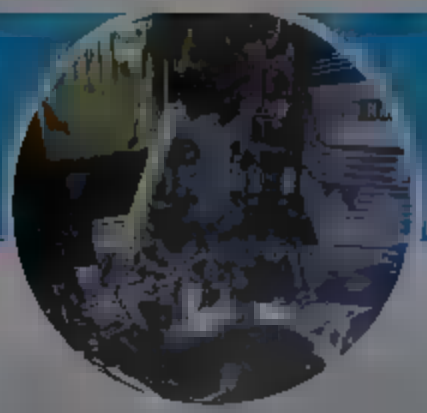
1 2 23

Yardley Yeadon @MichaelYeadon3 · 15h

Ferguson's original model is in the toilet & everyone knows he's screwed up yet again. He persists is massively over predicting things. His model assumed "its a new virus so no immunity: assume 100% are susceptible". That's just laughable. Nothing is completely new, but related..

6 17 90

Yardley Yeadon @MichaelYeadon3 · 15h



..to what's gone before. Even the 1918 flu pandemic 'only' infected 30%. He also assumed initially an infection fatality ratio of 3%. It's probably 0.3% & we knew early on that many in Wuhan had no symptoms. 3% was never possible. Finally, his model used a known serious flaw in..

2 3 23

Jackie @normaj62 · 13h

100% susceptible is actually correct for something new, you can't actually presume less than that but if the very great majority have mild or no symptoms to this new virus so then without testing, without manic counting, we would just have had a bad flu year!

Replying to @ToughBamboo @elinorw8 @Alanthegoafer

I don't know about zero need. If you're elderly & unwell, you've a distressingly high chance of dying from this virus, which could remain endemic at low levels for an unknown period of time. To a 1st approximation perhaps 10% of pop might choose to have it.

Young people were least inhibited by lockdown etc. They have probably been the most infected cohort. So I don't buy your logic. There is no evidence of an increase in the no of infected people anywhere, only more cases directly in proportion to no of tests.

5 24 93

Para @ParasiteControl · 10h
I completely disagree regards those dying. At point of lockdown we were seeing the weekly average deaths. Just a week after shutting down and the media pushing the fear factor. Deaths started to skyrocket. Once the Gov started to release the breaks, death figures started to fall

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @ParasiteControl @Godfrey28482926

The data show the daily deaths Max was April 8th, and note there are delays in reporting & collating, so maybe a day or two earlier. Infection to death median is thought to be around 23d. Go back 23d from Apr 8 & date of peak infection rate greatly preceded lockdown.

No, originally it was real, many people died, and many of us were alarmed, even frightened.
Not now though. The pandemic is over & I will continue to be a burr under the saddle of anyone who wishes to keep it going.

5 24 94

Para @ParasiteControl · 10h

I completely disagree regards those dying. At point of lockdown we were seeing the weekly average deaths. Just a week after shutting down and the media pushing the fear factor. Deaths started to skyrocket. Once the Gov started to release the breaks, death figures started to fall

3

The Goat & Papaya @mul06011618 · 5m

Yes, the deaths increased quickly as NHS was being saved. When you dump 25k sick old vulnerable out of hospitals prior treatment completion, the effect is death. Not pretty, but true

Moriarty @LeProfMoriarty · Aug 7

GlaxoSmithKline and Gates Foundation will be charging the govt (actually the taxpayer) £477 per person for vaccine. In the UK alone that would be £32 billion based on population of 67m. Getting clearer?

164 1.2K 1.6K

Yardley Yeadon @MichaelYeadon3 · Aug 7

While I think that's expensive it absolutely doesn't account for the conspiracy people imply. Reason: even big pharma has seen sizeable cuts to sales & income while costs increased. Pandemics don't make much money, net/net, even for drug companies.

4 2

Anewday@PeacefulNoncompliance @Anewday56697032 · Aug 7

They're making money. This is very well researched, and pretty shocking - if you're interested.

Orson, I don't understand your point. I agree with your opening lines, but I don't follow you. Can you amplify? What part of my tale doesn't chime with your perspectives? I have no special insight so while I think I have the broad thrust right, I'll be out on some parts.

2

Orson Welles @OrsonWe35330777 · 4h

I'm saying there are legitimate questions regarding the deaths attributed to the virus early on, and even now

It seems to me the definition of virus deaths was manipulated dramatically to drive up the virus numbers in order to instill greater panic

More panic - more control

2

Yardley Yeadon

@MichaelYeadon3

Replying to @OrsonWe35330777 @Godfrey28482926

Ok, Thanks. It's true we cannot be sure what someone died of, in many cases. We'll be able to tell if they've seriously bent the attribution because there will be far too few of something else as a result. Confusion between covid19, flu & other respiratory viruses is a problem.

More young people getting infected thanks to reopening bars, restaurants etc. Thankfully typically they don't get seriously ill so few hospital admissions now. However give it time. These young people will be infecting their families some of whom will need admitting to hospital.

2

Yardley Yeadon @MichaelYeadon3 · 2h
Young people were least inhibited by lockdown etc. They have probably been the most infected cohort. So I don't buy your logic. There is no evidence of an increase in the no of infected people anywhere, only more cases directly in proportion to no of tests.

1

JeremyG @Jeremy11223344 · 39m
Really?

> **Irene Tosetti** @itosettiMD_MBA
> Aragon, Spain. 1'300'000 population. July 20th, 8 covid cases in ICU.

I'm talking about U.K. as there is no doubt the infection is at different stages in different countries.
While very heavily infected countries have reached equilibrium with the virus, it'll be difficult to end it everywhere else.

Here's a good news story:
google.co.uk/amp/s/www.bbc....
"The company's trials found some people who had coronavirus but tested negative for antibodies went on to test positive for T cells - meaning more people may have some immunity than previously thought - and for longer".

1 2

Yardley Yeadon @MichaelYeadon3 · 59s

There are many sceptics who've noted that seroprevalence, the % with antibodies, is far too low for the U.K. population to be close to even the lowest theoretical herd immunity threshold. But consider this: not every infected person produces antibodies in quantities easily...

1

Yardley Yeadon
@MichaelYeadon3

The final paragraph, made me grip my head.
"The research suggests the Swedish strategy failed to generate widespread protective immunity, said Dr Simon Clarke of the University of Reading, who is not connected to the study"

6 23

William Coleman @wjc271 · Aug 13
Dave. There seems to be acceptance now that there is some cross immunity from previous coronavirus exposure to SARS-COV2. Reckon that's around 30% of population. So if you get close to 20% of population developing antibodies to SARS-COV2 through exposure you're at HERD IMMUNITY.

Ok. Go and check the % occupancy of the nations intensive care facilities. You know roughly what it's like: v busy. I happen to know it's nearly empty. As of today's report. I'll wait.

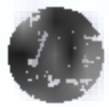
Again thats utterly untrue patients are being treated whoever told they arent is lying. But I guess your mates opinions are the benchmark eh...

2



Dean Campbell @DeanCampbell3 · 16h
2) The NHS have confirmed that treatments and screening for cancer, heart disease, etc. are massively reduced since February. Chris Whitty has confirmed that many will die or suffer major illness as a direct result. I was denied hospital referral by my doctor on the same grounds.

2 1

William Macdonald @McDuff73 · 15h
2/2 gonna need some evidence the NHS confirmed screenings are massively reduced and wont comment on your personal treatment but I work with referrals amongst other things and they are denied for a multitude of reasons but never had one denied for Covid...

Tens of 1000s will die; its an outrage! Hancock has ordered this. Ask yourself why?

10 45 154

William Macdonald @McDuff73 · Aug 16
Thats utterly untrue the NHS has adapted and is working as safely as it can to continue to treat patients 24 hrs a day 7 days a week.

3

Cec Podd @CecPodd · 14h
That solid gold waffle speak.

The NHS has adapted to not doing a whole lot. NHS site stats show bed occupancy levels

1

William Macdonald @McDuff73 · 14h
Yep less people filtering through A&E for a variety of reasons less traffic less accidents etc..
most people in hospitals arent treated by taking a bed they are treated in out patient clinics the majority of which are being conducted on the fone, unless the clinician needs f2f.

According to a recent report from a senior oncologist, we've lost this year at least 400,000 cancer screens. Many of those people will be diagnosed too late & will be beyond help, killed by lack of access.

..after a short time, enough additional people weren't susceptible and the pandemic went from expansion to slow decline. The fast rise is explained by varietion in susceptibility (there's a Gomez paper on that). Once 15-25% had been infected, it's stopped. It's over.

There are many sceptics who've noted that seroprevalence, the % with antibodies, is far too low for the U.K. population to be close to even the lowest theoretical herd immunity threshold. But consider this: not every infected person produces antibodies in quantities easily...

2 1 6

Yardley Yeadon @MichaelYeadon3 · 12h
...detected by current tests. That doesn't always mean they've not been infected. Some people seem to favour developing T-cell immunity instead. IMO the most likely explanation for smooth waning of the pandemic in U.K. is herd immunity, arising from a range of immune mechanisms.

1 1 11

Sarah Hatton @hatsoffto_sez · 12h
I have read elsewhere that it takes extra energy for the body to produce antibodies therefore if our bodies can fight viruses with T cells instead we dont go through a process of producing antibodies unnecessarily....is this correct? Thank you

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @hatsoffto_sez

I hadn't heard that as a reason, but it's certainly true that certain T-cells (CTL & NKT) can provide innate immune protection against virus infected cells. In addition, modified T-cells carry immune memory after prior infection & can clear viruses without using antibodies at all

Helene von Bismarck @HeleneBismarck · 20h
It is surreal that students were not allowed to sit their exams. This was possible in other countries, why not the UK: school buildings were empty because of Covid, so there was enough space to hold socially distant exams.

> **Stephen Pollard** @stephenpollard
> We need to keep reminding ourselves of a basic fact: not a single pupil has sat an A-level or GCSE exam. Every grade awarded is, of necessity, artificial. Destroying well founded hopes on the basis of made up grades is plain wrong.

Short but not sweet. I have an appointment with destiny. I've rarely been as angry.

> **Yardley Yeadon** @MichaelYeadon3
> This is the smoking gun paper. It ties together the concept of preexisting immunity (30-50%) to covid19 becayse of the similarity of the 'new virus' to its close family members. Now we add another 5% of young children who lack ACE2 entry receptors. It's not surprising that, twitter.com/yinonw/status/…

have some safety for school reopening.

2 1 11

Yardley Yeadon @MichaelYeadon3 · 9h

Are you saying that 4.9% could be infected with virus & that would be ok to reopen schools?
That's 1:20, so on average 1-2 pupils per class.
What have I misunderstood?

2

epsilon @epsilon3141 · 4h

Anything else than 0.0% is insane.

At a conservatively estimated reproduction rate of R0=2, virus prevalence would double every week.

So 4% will be 8% a week later, 16% after 2 weeks, 64% after a month.

insane.

If R is 0.2, it means for every 5 infected people, only one of them infects just one other. That was the estimate Ferguson gave live on BBC two weeks ago. R=0.2 means imminent extinction of the virus. If you said R=2, as you did, it would double on its infectious cycle UNLESS..

..the level of resistance to infection of people coming into to contact with the infected person is such that they can't infect anyone. That's what's happening & why the pandemic is ending. An R0 value which is characteristic of the agent at T=0, falling as % susceptible falls.

We are NOT talking about percentage of population who has been infected. Anecdotally, Geneva in the first wave already had more than 10% of population affected (as per Geneva serology study,The Lancet). Now we are again a bad spot.

1 1

Yardley Yeadon
@MichaelYeadon3

Replying to @itosettiMD_MBA @epsilon3141

You're not in trouble again in Geneva. As with everywhere else in Europe, we're seeing an increase in so called cases solely due to increased testing. I know this because in Geneva, hospital admissions & deaths due to covid19 are down & on the floor.

to reopen schools next week and positivity is 7-8%.

3 15 45

Irene Tosetti @itosettiMD_MBA · 11h

WHO experts actually say 2 weeks of testing with less than 5% positivity to have some safety for school reopening.

2 1 11

Yardley Yeadon @MichaelYeadon3 · 9h

2

Irene Tosetti @itosettiMD_MBA · 3h

No. I am speaking of test positivity. Test positivity: amount of positive tests divided by the total numbers of test (one person tested counts as one even if tested multiple times through the course of his covid disease). This is what test positivity % is.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @itosettiMD_MBA

Thanks. 5% is bizarre as a safety limit. We've never got faintly close to 5% positive in the community (up to 30% in hospital but at the peak).
In U.K. at present we're arounf 0.05% positivity, though we'd call that prevalence.

Also, outpatients are usually sampled, measured or at least viewed as well as spoken to. Phone doesn't get you that. Half the time, the patient doesn't know what's wrong with them. Doctors are smart & are much more likely to spot something pretty much only if they see them.

...with a friend who's something in PHE, involved in modelling the tail end of the pandemic. PHE guy tells my pal that "the pandemic is over & Govt knows this". But he's having running arguments with Neil Ferguson, who takes a different view. PHE guy says "no one had any..."

27 283 690

Neil's View @NeilView · 19h

I've no idea why Fergusson's being listened to. Even after allowing for the limits of modelling, he's been discredited before. Genuine question for the future is 'how are SAGE members selected/appointed?'
'Follow the science' only works if there's confidence in the science

1 4 13

Danny B @uayes · 9h

Sage was disbanded because they were legally obliged to publish minutes by legal challenge. It has been replaced by a new secretive advisory group that has no accountability.

2 2 4

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @uayes @NeilView

Cripes, really? I knew they'd been challenged & had disclosed minutes. Interestingly they never recommended lockdown.
So the replacement isn't SAGE but some informal sofa government thing? Worked so well for Iraq, IIRC.

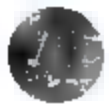
So they admit corona is not a truly lethal virus and it's basically a hoax to control the populus

4 5 21



Yardley Yeadon @MichaelYeadon3 · 18h
Disagree completely. If that's what you've taken from my tweets, you have a comprehension issue.
There was a short term highly lethal pandemic.
It is now over. We have good ideas & some data which explains it, post hoc.
That's all I'm saying in this thread.

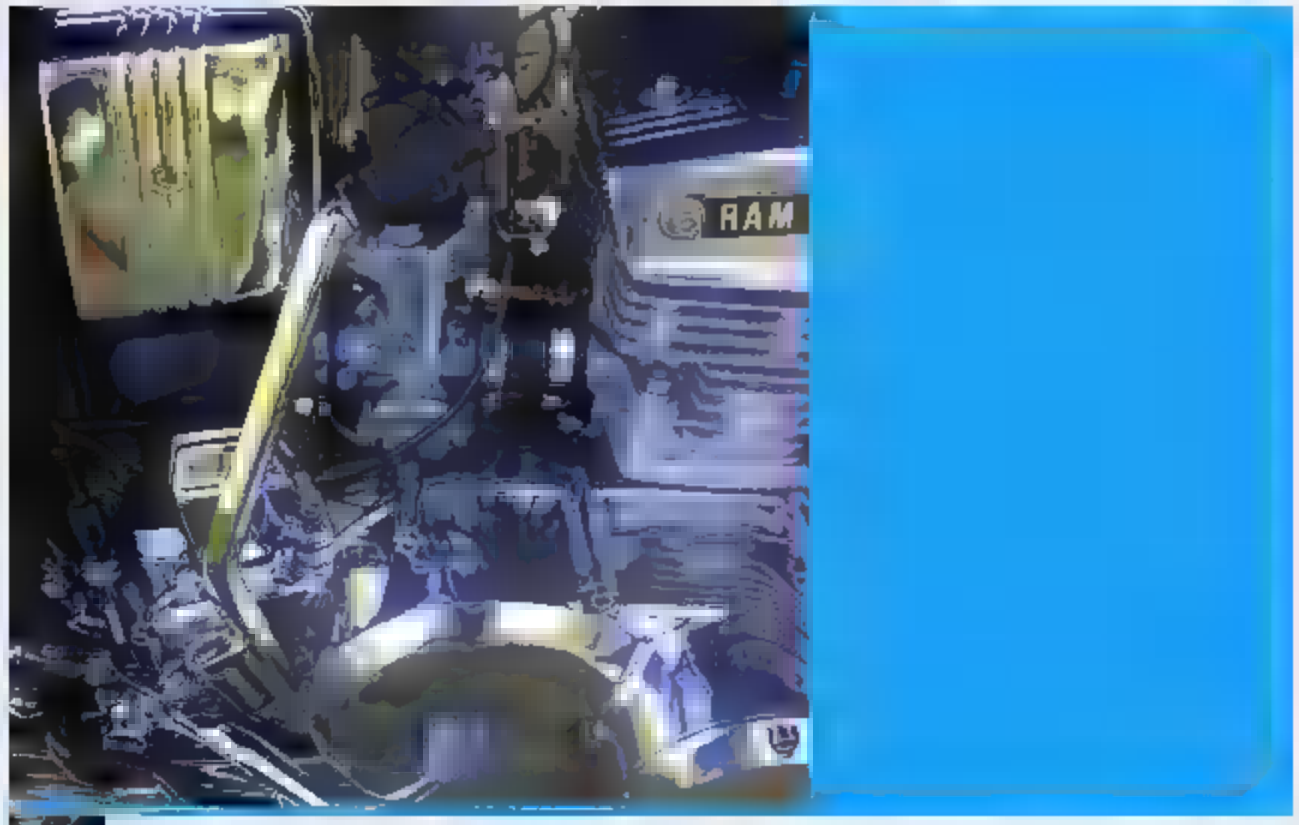
4 1 8

steve @steve_p33 · 12h
Highly lethal? Bit of a stretch isn't it? 0.1% or less (depending on which metric of the day) , mainly over 75's? The flu usually kills far more every year, until it disappeared this year. Maybe it took a holiday, knowing that covid had it covered ?

1 3

Yardley Yeadon
@MichaelYeadon3

Follow



Replying to @steve_p33 @PetarGemovic

The infection fatality ratio unclear & best estimates 0.3% than 0.1% & either is rather higher than most flu seasons. I'd call flu highly lethal but only in the vulnerable segment.
Anyway, that's not my point here. It's that it's over. There's no reason not to normalise.

NZ had a relatively short lock down thanks to taking prompt action. They then enjoyed freedom for all their citizens for 102 days covid free. They will get there again given the measures they are taking and it won't be so long either. 2/

1

Mark Johnson @MarkJohnsonTw · 8h
Nope, obsessing about cases is not helping. U.K. positivity rate is increasing but hospital admissions, calls to 111 999 and deaths continue to drop even with linkage being eased and at 0.6% positivity false negatives a big part, asymptotic case folk are not getting ill.

I would love to be proved wrong but this goes beyond incompetence. It is planned & its control. Why else introduce masks when virus has almost gone & now the rumour that they will be worn OUTSIDE when we know its not needed. Designed to kill us. Like closing down NHS.

1

Yardley Yeadon @MichaelYeadon3 · 10m

Honestly, I too felt fear over the mask mandate because it's literally mad. The prevalence of the virus is too low to accurately measure. The mask timing is ludicrous. But I believe I've uncovered the thinking behind it, assuming you'll credit anyone in Govt with that ability.

1

Yardley Yeadon @MichaelYeadon3 · 6m

It all hinges on Ferguson's model. He maintains 100% of us started as susceptible. Seroprevalence studies suggest (to amateurs) just 7% nationally have been infected. Since his model says 65% needed for herd immunity, we're a thousand miles away & the 2nd wave is coming. Hence..,

..masks & mass screening plus new tests from Oxford Nanopore. Worse, since the 2nd wave is coming, Whitty can't advise the NHS to normalise but keep it at DEFCON2.
This has to change & I'm going to attempt to communicate high up in Govt. Technically, the task is simple for me.

think - what does it mean if I have a positive test?' BASE RATE FALLACY 'even tests that have a very low chance of giving a false positive in an individual case will give more false than true positives overall'
en.m.wikipedia.org/wiki/Base_rate... @deb_cohen

19 92 222

Kevin Ryan @kevinmartinryan · Aug 9

I'd like to think that many of the positive tests are false. However surely it has to be meaningful that NZ, still doing several thousand tests daily, do not seem to have a problem with this; their Ministry of Health state that they 'expect very few (if any) false positives'

The FP rate varies greatly on how the assay is run. It's a cyclical amplification based technique involving 20-30 heating & cooling cycles plus addition of reagents. If run enough cycles, everything is positive; too few & everything is negative. Lots of scope for error.

3 2

Dr. Tannahill Glen @tannahillglen · Aug 11
Do you know their testing protocol and numbers? (I don't). The current concerns about FPs arose in the context of massive widespread testing of asymp persons without known exposure (so context is everything). Also prevalence in that NZ setting is important

2

Kevin Ryan @kevinmartinryan · Aug 12
2. But the testing numbers do not. A pity because I am most interested in the local cases as, until yesterday anyway, they were a population with no positives for c4 months - a pure Covid-free population. In total they've done 500k tests, 400k since 21/4, 3.5k daily recently

2 2

Given the belief that they were virus free, what was their (presumably false) positive rate?
If they claim zero, I'm sceptical. It can't be zero, once it's appreciated what the test measures & how.

Dr. Tannahill Glen @tannahillglen · Aug 11

Here, we are testing employees and students and new and existing hospital patients—regardless of symptoms or illness contacts. If prevalence low, potential for harm is greater than the false neg worries we had months ago.

1

David Williamson @thenpgeek · Aug 11

Is it? Should we not hope for negative results from the potentially-asymptomatic attendants working with folks in retirement homes? If the 10-14 days out of work is intolerable, maybe kick in an automatic retest provision should the test be positive?

True, but this only applies if the testing is on random samples of the population. But if tests are for a reason (symptoms, or recent contact with symptoms) then the a priori probability of true positive is going to be much higher. Or have I missed something?

4 6

James @jas88 · Aug 9

Early on, yes: tests were scarce and done only on symptomatic patients plus hospital staff - now they're testing the public, including genuinely random tests via ONS for statistical purposes, it's shifted a lot.

1 2

Iain Strachan @igdstrachan · Aug 9

Yes but how much? How many tests are random samples? ONS survey was 100k tests over 14 days. Not a huge portion of the total. My son's just done a test because he's got a cough & KCL app said to get a test. That's because his a priori prob is higher. Hoping for negative!

I think they've found 53 positives out of 120,000 tests over several weeks.
Carl Heneghan calculated that with generous assumptions (lower FP rate than is likely to be real & higher prevalence than is likely real) the FP are 75% of all positive tests, & conceivably ALL of them.

I have to disagree - see my spreadsheet calcs below. With current prevalance, and ONS estimate of 99.96% specificity,I estimate false positive rate to be 0.51. But with a 0.6% test positive rate the FPR drops to 0.06. Much higher prevalence in tested population than general.

1

Yardley Yeadon @MichaelYeadon3 · 2m
I think the true prevalence is 10x lower than in your example at 0.06%. And the specificity 10x worse at 99.6%. I'll check numbers in Heneghan's model & revert.

..helps us at all & IMO it should immediately cease. A couple of closing points, which I can't ignore, even though they're embarrassing & some are totally tragic and scandalous. First, lockdown. I think there is no solid evidence that it played any role in slowing transmission.

1

Yardley Yeadon
@MichaelYeadon3

Follow

That's not so terribly surprising because a little later, we realised that the vast bulk of transmission was going on in & around hospitals & care homes. This is no criticism: it's where ill people are & these viruses are almost impossible to prevent moving between people.

..less cell surface anchorage points for the virus, and that may be why the virus finds it harder to infect children. In turn it may explain their benign symptomatology AND their being poor transmitters. There maybe other factors at work: I can't claim this thread is exhaustive.

I don't know what the position is outside a handful of European countries. But people in France, Italy, dare I say Sweden, may have differing or convergent views. So some intergovernmental talking is probably in order. Thanks for tolerating this TL/DR.
Mike Yeadon, PhD

Here it is. As stated it's a general respiratory virus transmission study, preceding covid19. On balance, I'm drawn to the probability that it's the same with the current virus.

The PCR test looks for defined DNA sequences characteristic of the virus. The test first converts the RNA in the virus to DNA, then amplifies what is produced in a heat/cool cycle. It can be correct, false positive or false negative, which matter or not depending on context.

10/ Additionally, even if our most optimistic speculations about crossreactive T cell memory were found to be correct, it would mean that just as many people would get infected with SARS-CoV-2, but fewer would become severely ill and die from COVID-19.

15 154 581

Wes Pegden @WesPegden · Aug 11
Thanks for the great thread!

Obviously, even just affecting duration or severity of infection could have an effect on transmission patterns, and thus, on the number of people infected.

But presumably your point is that you think it would not make anyone immune to infection.

11/ T cells generally don't completely prevent infections, they limit disease (make it shorter and/or less serious). Thus, wearing a mask is much more effective than hoping you and the people around you have pre-existing T cell memory. Wearing a mask stops infections.

Replying to @profshanecrotty

The only large, randomised controlled trial of different mask types on transmission of respiratory viruses provided no support at all for the contention that masks reduce transmission.

A WHO meeting sees, at minute 21, Mike Ryan unequivocally dismissing a role for pre-immune T-cells. Says we're miles from HIT. He could be right.
Is there data permitting us to ignore it? If not then his dismissal seems to be closed minded.
Can anyone explain what Ryan didn't?

"RNA virus in the cell can be detected with PCR testing one to two months after the elimination of the cell"
I do not know how often this would be present at high enough levels to cause a positive PCR test; if someone does have an estaimte, please advise.
That said, 1/2

3 1

Adrian Fuller @AdyFuller49 · 52m
From what I have read, there is no world wide 'gold standard' of amplification cycles, which is concerning. If you have UK using 32 cycles and USA using say 36 cycles you 'could' get different results from same sample.

1 1

Yardley Yeadon @MichaelYeadon3 · 9m
This is an important point. You're right. Being an amplification based technique, if trying to detect something potentially present at low amounts, there is a balance to be struck. Too few cycles to a measuring / decision point & positives will be missed, but false positives...

Wokeman, #KBF @Wokeman8 · 18h
Ivor might be an idea to plot the test positive rate, should be reasonably flat post peak.

Yardley Yeadon @MichaelYeadon3 · 3m
It was falling steadily in U.K. until recently, June IIRC. That's reasonable as virus prevalence fell. Positive rate stopped falling recently as Carl Heneghan observed. That probably means prevalence is <false positive rate. It won't fall & might rise if they change a parameter..

Because of SD & LD measures, there will likely be areas in each country which have reached a lesser level of community immunity.

If & when we see an increase in actual illness or, even worse, deaths, in those areas - god save us from the reaction of the #LockdownLoonies.

So the country just surpassed 5 million cases with 160,000deaths.

10% is 32.8 million, so 27 million to go. I wonder how many more die to reach herd immunity.

39 2 26

Paul Garrad @GarradPaul · Aug 11
We don't know how many have had it. That's the point. We can estimate population that have had it based on the % testing positive though

1

Yardley Yeadon @MichaelYeadon3 · 7m
Actually we have several ways to estimate the % who've been infected. It's roughly 3x the seroprevalence. This because in a study for every person who seroconverted after confirmed PCR positive two did not.
It's rough, but it fits remarkably well and also matches the % infected

Good point on Nightingale hospitals. Perhaps having noted they weren't overrun, they've reasonably decided there's no outcome in which they're needed.

This authors of this study do not remotely suggest that we have any natural immunity. It does say the immune system may have been activated by prior corona virus infection but more study is need to know if this was protective or pathologic. Confirmation bias much?

Yardley Yeadon @MichaelYeadon3 · 4h
Its normal not to over-extrapolate in a scientific journal article and of course they cannot claim that which has not been shown. But thats to misunderstand how science works much of the time. These T-cell responses are not untypical of those seen in protected individuals.

1

wayne gravell @gravell_wayne · 20m
I didn't misunderstand anything. The study was used to justify saying there is cross over immunity and after reading the study I agree that you can not say this is the case as there is no indication that this T cell response is is immunity or pathology. That is what it concludes

Jonathan Toop @JonT4 · Aug 16

We need to know what the levels of false positives actually are, this info seems to hold the key to hopefully escaping this madness

3 11 42

Jonathan Toop @JonT4 · Aug 16

It just struck me when looking at 1040 PCR positive tests out of 122,000 in the U.K. It was possible for the majority to be false positives and the chaos caused by reintroducing quarantines and continued lockdown measures to be based on false information.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @JonT4 @allisonpearson

If you look at the careful analysis of the PCR test by Prof Carl Heneghan (there's a simple version in The Spectator, though he's published elsewhere on this too) he shows how MOST & possibly essentially ALL positives are false positives, since June.

Thank you ❤ If anyone asks a question on the logic of it, I will try to respond. I'm not saying I'm right. But this is as far as I know the leading explanation in a class of one. It's fully internally consistent & I don't think there are big gaps (data that doesn't fit at all).

Can I ask? What's your honest opinion on this Covid nonsense? UK Gov stated 19/03 it is not a highly infectious disease and Anthony Fauci wrote in the New England Journal of Medicine that it is no worse than an average flu!!
To me these are huge red flags.

Ironically we never needed many ventilators. The belief that a large # of covid19 pats needed them was a misapprehension about the nature of their illness. Long & short of it, excess use of ventilators is often lethal. Oxygen masks are more often appropriate.

The same ventilators that killed people with COVID?

1 24

catherine watkins @lilythepink15 · 19h
If you need to be rendered unconscious then you HAVE to have a ventilator, or you die at that point . Those who could cope with NIV got it. Those who needed intubation were by definition sicker . But 60 % of the ventilated survived. So the ventilators did not kill them .

3

Yardley Yeadon
@MichaelYeadon3

Replying to @lilythepink15 @planetarysound @MicrosoftUK

In Italy, pulmonologists were appalled at the casual way colleagues were intubating & ventilating patients. After some vigorous debate, an informal trial was run: high O2 masks vs ventilators. They called it off after a week, declaring a No Contest.

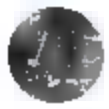
Tess Venus @LadytessTv · 21h

Ironic that full ventilators do more harm than good, shame nobody took the time to work that out first!



1 6

catherine watkins @lilythepink15 · 19h

Some people will die without a full ventilator. Not all patients can cope with non invasive ventilators. And believe it or not we actually have some patients who do not have covid. Some patients NEED to be unconscious and cannot be managed on non invasive methods

4

Yardley Yeadon

@MichaelYeadon3

Follow

Replying to @lilythepink15 @LadytessTv @MicrosoftUK

True, agreed. But surely you don't dispute that early on, there was a strong belief that early intubation was key to survival, the so-called Wuhan Protocol? Soon it was realised that this was incorrect.
No question, ventilation in skilled hands is life preserving.

Not only are most positives false positives now, because the prevalence of the virus is way lower than the false positive rate intrinsic to the PCR test, but it's been this way for very many weeks. That's why on ZERO occasions have 'spikes' led to anything, like deaths.

Come on Alistair, spell it out: are you saying cases don't matter, so could rise at any old rate? Or are you saying we wouldn't get many cases if we returned to normal, so it would just bubble along at a lowish rate and not cause many problems?

We've reached herd immunity. Seriously. It was never after 65% infected. The Imperial model is utter pap because it ignores the T-cell responses that 30% already have. Google Gomez or Gupta at Oxford. Their papers offer two, complimentary explanations.

Helena Morrissey DBE @MorrisseyHelena · 5h

Well said @Telegraph editorial today.

But for that to happen the Government must accentuate the positives, such as the low incidence of the contagion, empty hospitals and fewer deaths than the annual average. Instead, we are still assailed with a daily litany of infections, threats of more lockdowns, hastily imposed quarantines and warnings of second waves.

What is needed above all is confidence, and yet people are being kept in a state of anxiety about the future. They crave reassurance. It is up to the Government, and the Prime Minister in particular, to provide it.

You don't need to wait to see if hospitalisations & deaths rise. We've already run that experiment. We had no masks from prior to lockdown until a few weeks ago. In that time, for months, all indicators fell continually. If the virus could have re-emerged, it already would have.

Well said @Telegraph editorial today.

But for that to happen the Government must accentuate the positives, such as the low incidence of the contagion, empty hospitals and fewer deaths than the annual average. Instead, we are still assailed with a daily litany of infections, threats of more lockdowns, hastily imposed quarantines and warnings of second waves.

What is needed above all is confidence, and yet people are being kept in a state of anxiety about the future. They crave reassurance. It is up to the Government, and the Prime Minister in particular, to provide it.

paul jones @pauljones190866 · 3h

Government has become a casualty of it's own success in lockdown. The apocalyptic messages at the start of the pandemic driven home by opponents looking for opportunities, have made a return to a semblance of normality virtually impossible. Even after great strides in outcomes.

A vaccine won't change anything . Vaccines are never 100% effective. For me, any suggestion of mandatory vaccination will throw me, an informed & rational person, into a complete panic. There isn't the slightest justification for mass vaccination. We're already at herd immunity.

No. You don't understand what you're suggesting. People who get infected but show no symptoms usually have memory T-cells but not antibodies. Mild cases, T-cells & temporary antibodies.
The absence of antibodies is simply NOT a measure of whether you've been infected.

He did make that statement about other viruses. He was right. The test merely lights up if an RNA sequence found in the authentic full-length sequence is picked up by the primers ('bait') selected. Fragments to infectious virus, both positives.

So use evidence to argue why the lockdown is unnecessary and to support a case for change. Not sure what you mean by insane schools debate, local actions and responses will be key, and hopefully rare.

1

Aneil Bedi @dogsboro · Aug 17
Show me any evidence lockdown works, there should be many many examples by now.
The 'are school's safe?' debate is insane because we have many many examples of schools being open with zero infections. Please do some research and stop parroting nonsense.

2 1

Keith Hill @keithrhill1954 · Aug 17
Zero infections in those schools because of actions taken - with some international variation. Lockdown impact clear from data over time (deaths, infection) and subsequent localised spikes after easing (again lockdown strategies vary, our inconsistent mess still contained)

Even Chris Whitty doesn't believe that. In his evidence to a recent parliamentary select committee, he conceded that peak infection had passed BEFORE lockdown. Not only does that prove that lockdown didn't turn the pandemic, but it means - crucially - that something else did.

They dictate how it is spent. If they don't agree with goverment spending they can either refuse to sell them vack or buy more. A&E have closed walk in. Rushi has said that tax will have to go up. It us borrowed with strings attached. Cuts Cuts Cuts basically.

Oh I see, because of the at least nominal independence of the BoE. I wonder how independent it really is. For ex, is there anything in the Covid19 'war powers' Act in relation to bank independence?
I'd lay a modest bet that, if HMG deems it necessary, they can assume control.

It is off topic. I sorry. The bank purchased 300bn of goverment bonds. That is to cover them financially and also pay for furlough and covid-19. They dont have to sell them back to the goverment. They effectively own the goverment.

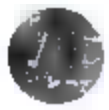
I get it that you like the dramatic 'it's over' flourish. But humour me and elaborate: do you mean you think it's run its course and we could all go back to normal without cases increasingly dramatically again?



12 2

JamesHeartfield @JamesHeartfield · 6h

There are two models here -one is that there is a great body of coronavirus that the lockdown has been holding back, that will engulf us once it is removed; the other is that the pattern of infection was largely unaffected by the lockdown and has run its natural course.

The prob with the 1st notion is there's not the slightest hint of empirical evidence OR underlying scientific hypothesis to keep it breathing.
Now, your 2nd notion matches the empirical data & is underpinned by an internally consistent & complete body of work.
What do you think?

Nothing is bad about France or Germany - which is why the majority of asylum applications are made there - and only a minority try to get to the UK. The way that refugees are treated has nothing to do with the EU, so our departure will change nothing.

I was outraged that a 16 year old could die in such a heartbreaking way, but now it's just a 28 year old... I'm fine with it.
Thank fuck for that.

4 1

●●●●● @FoxxysTweets · 4h
That's not the point, it's a tragedy, it's the fact that 99% of the MSM have pushed he was 12 years younger and left out he's already applied for asylum in France. It's agenda driven, not fact driven.

3 28

Dennis Tueart's Overhead Kick @_Togger · 4h
I'm not disputing it was a tragedy, It's just that I don't give a shit that he was 16, 28 or 56. A tragedy is a tragedy, and age has no correlation.
Are you seriously saying that the so called MSM is biased to the left?
If so, you're a fucking idiot.

3

david oconnor @daveoconnor1309 · 3h
No matter the age it was a self induced tragedy. Nobody else's fault and certainly not ours as he died in French water.

I've a friend who shared that nugget with me a few days back. His head in his hands.
No intent to normalise NHS services anytime soon.

4 18 36

Lydbloo#KBF @lydbloo · 2h
NHS ? Healthcare for all ?
Who allows them to behave like that?
Serious question is it one person who can ultimately shut/open NHS or is it a panel that meet & decide?

Anyone know who is telling the different NHS trusts to basically exclude most of the population?

1 1

Yardley Yeadon @MichaelYeadon3 · 1h
I do not know that, but you know that the illusion of independence is just that. I am guessing that the advice of the CMOs (there are two, not just Whitty) lands heavily these days. If they're told "top priority is keep the decks clear, to cope with the 2nd wave", they'll comply.

1

Lydbloo#KBF @lydbloo · 4m
Is this also compliance through fear I wonder?
This time fear of sticking your head out, loosing your income/standing, going against the flow?
Where have all the pioneers gone ?

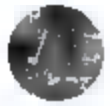
No. I don't believe you can expect any politician who has no expertise or experience in this area can go against the advice of their advisors who do.



2 2

Brian Keniry @hillfort · Aug 18

But, I think one of the lessons has to be, who checked the homework of the advisors. e.g. Fergusson's modelling for one. There ought to have been an independent 'red team' to challenge the advice, even clever people can succumb to group think, perhaps especially clever people.

2 1

EyesOnThePrize @EyesOnThePriz12 · 14m

An independent red team may have been useful.

But there's a thing called 'project management' which is supposed, inter alia, to reign in the worst excesses of techy lunacy.

It's a skill which has been in retreat for many years, so not really surprising we're in this mess...

Proper, old skool PMs kept my dept running when I was in a big co. Once you get senior in such places, you actually become in many ways powerless. You can't do anything except through others, and not even that, if things are a mess. So I used to be good pals with cracking PMs!

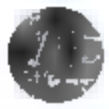
BREAKING: GCSE students in England have achieved a record-breaking set of results, with a surge in the number of top marks handed to them after exams were cancelled due to #coronavirus.

2.0K 1.4K 8.8K

alisonrebecca @alisonrebecca · 16h
If your daughter was getting her results is that what you'd tell her? That she'd achieved nothing! Even though the predicted grades she was given were based on her performance to date?

8 6 462



Julia Hartley-Brewer @JuliaHB1 · 16h
I didn't say they'd achieved nothing. They couldn't achieve results in exams they didn't take. They've been awarded/given grades likely to reflect how they probably would have achieved if they'd taken the exams. It's not the same thing. My daughter wouldn't need to be told that.

110 14 320

karen @milliemoo66 · 10h
Neither do my children need to be told that. It is not their fault its turned into a fiasco - my daughter in particular is still gutted she couldn't sit her exams, they should never have been cancelled.

1 3

Even though 2nd wave seems to be mild in Europe and not filling hospitals?!

2 3

Yardley Yeadon @MichaelYeadon3 · 10h
It's NOT a second wave. It's a huge wave of testing. Even in Spain.
Ignore hospitalisations there. Some people are being admitted there on the strength of a symptomless positive PCR test.

3 5 14

Phoenix44 @Phoenix4419 · 40m
I'm not sure there's a serious definition of "second wave"? But if lockdowns work, then there must be some people who didn't get infected but who can be infected. So when you ease lockdowns they get infected. If lockdowns "work" at all you will get a second bump of infections.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Simon Dolan #KBF @simondolan · 4h
Sure they did. We believe you.

Office for National Statistics (ONS) @ONS
Nearly 7 in 10 (69%) adults said they think the police should be very strict or strict in enforcing rules to help reduce the spread of the #COVID19.

Show this thread

0% I don't bite, unless I put my teeth in. @darrenmark69 · 4h
When will people get it. Rules and regulations CANNOT be enforced. And what they have set as mandatory are civil laws that police have no power to enforce either. If get served with a penalty notice just don't accept it, ask go court, tell court unlawful arrest, sue the police.

Did you know the official internal position & #1 priority for the NHS is something like:
"Maintain battle stations & prepare for the 2nd wave"?
I've a friend who shared that nugget with me a few days back. His head in his hands.
No intent to normalise NHS services anytime soon.

6 26 64

just another Karen @Nicolac88612909 · 2h

I am having a minor procedure in hospital next week I received more info about almost non existent COVID-19 than I did about the procedure! Utter joke... I can where this is heading.

I struggle to understand people's thinking on masks. We didn't have them for months, during which the prevalence of the virus fell steeply & continuously. If a reversion to more infections, illnesses & deaths was possible, it would have happened. It didn't. Masks played no role.

> **Yardley Yeadon** @MichaelYeadon3
>
> Replying to @Elenski55 @mjdennis54cb and 3 others
>
> You don't need to wait to see if hospitalisations & deaths rise. We've already run that experiment. We had no masks from prior to lockdown until a few weeks ago. In that time, for months, all indicators fell continually. If the virus could have re-emerged, it already would have.

But the flu season is nearly upon us and that's the ladder that gets us out of here, keep digging for a few more weeks the cavalry is about to arrive

2 3

DPB @DpbMccrossan · Aug 17

It's the escape plan blame new respiratory deaths on the flu which is exactly what it is. Probably more prevalent because of the hand washing, sanitizing and mask wearing lowering immune systems.

1 2

Yardley Yeadon

@MichaelYeadon3

Follow

Replying to @DpbMccrossan

On the contrary, flu deaths will be ascribed to covid19. Clinically they're similar on a single case basis (they're diff if you compare statistics over 100s of cases, but that's not how it works IRL).

OK, who knew that right now in U.K., flu is killing 5x more than is covid19?

Replying to @LonsdaleKeith

Very interesting, thank you. Yes, I've heard it said that Tier 3 testing is "not highly regarded". My contact hasn't been specific about FPR, so I'll ask.
At 0.17%, we've no chance of detecting low prevalence virus if 5-10x lower. It'll be overwhelmingly false positives.

I plan to put a detailed draft together based on this piece as a working paper in the next couple of weeks with a full battery of sensitivity analyses. We'll also publish further updates when the MRC & ONS models (or any other credible models we find!) give new estimates.

1 3

Daniel Howdon @danielhowdon · 7h
I did consider inclusion of other daily infection estimates such as the higher ones here, but examination of this data suggests that (AIUI unlike for model estimates produced for the US) the infection estimate is a function solely of announced deaths covid19-projections.com/united-kingdom

1 2

Daniel Howdon @danielhowdon · 7h
A really important point to make is that you CANNOT use these estimates and scale up total deaths since March by (1/our estimate) to give total estimated infections in England. Our estimates refer to the more-or-less contemporaneous situation as of late July / early August.

1

Tom Andrews @WeVotedToLeave · 18m

To clarify that point, masks available to the public include N95, N99, FFP3, half face respirators, and manufactured and self made cloth coverings of various designs and quality

1

Tom Andrews @WeVotedToLeave · 14m

Taking surgical masks and respirators initially:
"surgical masks provide around a 6-fold reduction in exposure. Live viruses could be detected in the air behind all surgical masks tested. By contrast, properly fitted respirators could provide at least a 100-fold reduction"

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @WeVotedToLeave @UKblockhead @mrmarkdolan

Great! So who is using properly fitted respirators?
I agree that it is possible to prevent transmission. But we'd struggle to perform activities of daily living while do equipped. So compromise kit is in practise deployed, and they don't reduce...

Trevor Brown @trevorcharlesb1 · 51m

Boris has completely lost the plot ,I fear for his sanity, only a Madman would keep doubling down on ever increasing restrictions to combat a virus not much dangerous than a severe dose of flu. Boris needs replacing with Gove, NOW!! or the UK will be totally ruined.

Actually that's thought to be the main route of transmission. Droplets fall on everything, someone touches contamination then their face (mouth, nose, eyes). That'll do it.

I couldn't believe what I was hearing. No, Sir Mark, people chose repeated flu vaccination, because it's a different agent each year. Coronaviruses could mutate, but so far this one hasn't is any important ways. Hardly anyone will need a vaccine. Herd immunity greatly reduces..

..the need. While covid19 does look more lethal to the vulnerable, sizeable tracts of the population (such as young children) aren't at risk with or without HI. More likely this virus will become endemic at low levels & vaccine protection + HI means it'll fade from consciousness.

As used, masks don't protect anyone but likely some will develop bacterial/fungal lung infections from unhygienic face covers. And the virus prevalence is so low it's v unlikely you'll encounter an infectious person. Masks are irrational at this stage. Yes, sick of the lies.

No. That's not the reason which was predominately due to high rates of infection early on, before we realised just how much trouble we were in. The pandemic is 99.8% done in U.K., in relation to deaths.

My neighbours have been doing this weekly since beginning of lockdown. Small garden and lots of people including small children. I have rang 101 and they said they can't attend. Sick of phoning now

742 16 60

Phoenix44 @Phoenix4419 · 13h

And yet clearly they are neither all dead or even ill, since they've been doing it for weeks. Is that not telling you something?

4 6 191

scratchal @scratchal · 12h

It doesn't work like that. If someone got Covid say 10 weeks in, it gets spread to everyone else at the gathering. Stay Alert Stop Covid

22

Andy Hammond/_/ @BourneWolf · 9h

Keeping the infection rate down before winter sets in, is the target (Spain already seeing deaths rising again). Young ones seem to be coping with it, BUT do you want to be the one responsible for killing your parents/gandparents?? I certainly don't.

5

Yardley Yeadon
@MichaelYeadon3

Replying to @BourneWolf @scratchal and 3 others

My hope is that as many proof who are middle aged & younger and fit / well catch it long before winter. Bang in a few % over the herd immunity threshold while protecting the elderly / vulnerable. That's how we get through winter.

Not trying to be difficult, but I don't wits valid to divide deaths by confirmed infections because we know we miss the vast majority of the latter. The result of your sum is actually 3.4%, suggesting infections are 10x greater than stated.

It's been isolated from people who tested positive by PCR. Virus def cultured in cells in vitro. Also, healthy ferrets dosed with isolates from sick humans then develop 'ferret flu', confirming a transferable infectious agent. I don't think there's any doubt it's real.

...ground for anyone wanting to "track the disappearance of a viral pandemic". It wouldn't even be cheating, except in one regard: to hold equivalent a positive test at low cycle threshold in a sick person in April & a positive today at high cycle threshold in a well person.

3:48 PM - 22 Aug 2020

1

Yardley Yeadon @MichaelYeadon3 · 16s

I'd be interested in any arguments or data which invalidates this idea (because that would put a line through it). I'm not satisfied by the explanations of huge no of cases but not illness. It's fishy, to say the least. I'm interested in your hypotheses on how it's happening.

1

Yardley Yeadon @MichaelYeadon3 · 16s

One more thing. I read Prof Heneghan's review of attempts to correlate PCR positive w infectiousness. Interestingly, positives at high cycle thresholds are much less likely to be infectious. I further hypothesise test subjects are not only not ill, but mostly non infectious.

It occurred to me today that the reason 'cases' & illness went hand in hand earlier, with a short time-shift, yet now 'cases' appear not be linked to illness, is that the 'cases' are not at all the same thing. Early in the year, the only people getting tested by PCR were people..

Genuine question. Why are all the mask myth spreaders on the extreme far-right?

Is there a connection? Are they more susceptible to conspiracies?

It's a good point in relation to antibodies. My sense of it is that being more heavily infected & ill are more likely to seroconvert. Here's the thing: v mild cases often don't seroconvert, but they do develop T-cell memory. Most asymptomatic infections, perhaps.

One more thing. I read Prof Heneghan's review of attempts to correlate PCR positive w infectiousness. Interestingly, positives at high cycle thresholds are much less likely to be infectious. I further hypothesise test subjects are not only not ill, but mostly non infectious.

It's useless when case numbers are small & uncertain, because R is calculated by comparing the numbers adjacent in time. Two estimates of the same population could yield R values which are wildly different. You cannot drive policy off such methodologies.

Gwyn Carwardine @GwynCarwardine · 11h
I do wish people wouldn't make claims about herd immunity. It's non verifiable. What they are is out of flu season. Let's see how immune they are during winter

3

Yardley Yeadon @MichaelYeadon3 · 6m
It's definitely verifiable. All the methodologies are in place. Measuring T-cell responses in PBNC has been done & many labs & the repeated finding 30-50% of people had these, to SARS-CoV-2 before infection, rising steeply after. There are of course antibody assays. I think...

1

Yardley Yeadon @MichaelYeadon3 · 4m
..that seroprevalence underestimates infection history but the T-cell responsiveness won't. Recent work shows that mild to asymptomatic infection rarely seroconvert. I don't think it's wild to infer from seroprevalence plus a mangles constant on seroconversion that U.K. has had..

..around 20% infection, which Gupta & Gomez separately suggest is enough to terminate the pandemic. If instead we use an estimated IFR & deaths we come out in the same order of % infected. So a decently supported hypothesis to be tested experimentally.

One more thing. I read Prof Heneghan's review of attempts to correlate PCR positive w Infectiousness. Interestingly, positives at high cycle thresholds are much less likely to be infectious. I further hypothesise test subjects are not only not ill, but mostly non infectious.

3 2 19

EyesOnThePrize @EyesOnThePriz12 · 7h

Mike, it doesn't really 'matter' IMO.

If ONS survey testing is flawed (probable!) & inflating the +ve's, the @CebmOxford IFR would need increasing. But multiplying infections by IFR would still give the same answer. It's all about illness & deaths.

Interesting. It further occurred to me that logistically it'd be simple to re-test every positive. There aren't many in relation to number of tests, and if they're real positives, they'll almost certainly repeat. But if they're false positives, they'll prob be negative on retest.

1 2

Yardley Yeadon @MichaelYeadon3 · 19h
So why aren't they doing this? Anywhere. They're all doing synchronised terrible science.
I've never seen anything even vaguely this dreadful.
Yet matters of life & death pivot on these results.

1 3

CTCCCTTTGTTGTGTTGT #KBF @RajagraUK · 19h
I'm not sure about here, but in the USA every infected patient is repeatedly tested until they have 3 consecutive negative results.

During that process, every positive result for that one patient is added to the stats.
...

1 2

CTCCCTTTGTTGTGTTGT #KBF @RajagraUK · 19h
... There is another "legitimate" process where they test multiple swabs together, for efficiency. If only one test swab is infected, the overall result is positive, and every tested person gets a positive diagnosis.

I forget the proper name for this practice.

..around 20% infection, which Gupta & Gomez separately suggest is enough to terminate the pandemic. If instead we use an estimated IFR & deaths we come out in the same order of % infected. So a decently supported hypothesis to be tested experimentally.

1

Gwyn Carwardine @GwynCarwardine · 27m
Do we have this available yet in some peer-reviewed research? I'm happy with the principle and it could well be the case but need to see the evidence

1 1

Yardley Yeadon @MichaelYeadon3 · 1m
All the components are published. No one has pulled it together. I'm not credible as I've not studied virology & im a PhD not a medic, or an epidemiologist. That doesn't mean I can't assemble evidence. I'm highly qualified to do that. But in sharing here, others will have to...

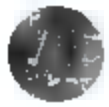
...positive in the PCR test because the designers used primers (bait) for portions of SARS-COV-2 which are not shared with the other CoVs.
On T-cell repertoires, those previously exposed to endemic CoVs will have T-cells recognising various sequences in each of those viruses..

1



Yardley Yeadon @MichaelYeadon3 · 3h
...and some of those sequences are shared by SARS-COV-2 and at least one of the other a CoVs. That's been shown conclusively, paper in Science this month. If I ever knew, I confess I can't recall what the T-cell or antibodies are directed to: the RNA or the protein. Others know!

2 1

DavidM @DavemRizzo · 3h
Just to clarify. Can any non common cold causing Coronaviruses test positive in the Covid tests? The way the govt changed Covid to Coronavirus has been questioned.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @DavemRizzo @aranmlewis

I bloody hope not. It should not be possible, so long as the designers of the PCR test 'primers' are chosen with the goal of specificity.
I don't have the info or database access to personally check. I'll see if an academic pal can check.

People should be told that R is a useful concept & guide during an obvious expansion of an epidemic & also on the way down, to a point. It's only useful when there are enough cases that an accurate estimate of R can be made. If the no of cases are small & uncertain, R is useless.

1 4 9

Yardley Yeadon @MichaelYeadon3 · 24h

It's useless when case numbers are small & uncertain, because R is calculated by comparing the numbers adjacent in time. Two estimates of the same population could yield R values which are wildly different. You cannot drive policy off such methodologies.

It was an utterly impossible task at the time. You'll probably scoff, but there's good evidence that, around the infection peak, roughly 400,000 new people were infected each day.
Track & trace is not, I believe, recommended by WHO in situations like this.

Excitingly today, I'm proof reading & adding to a Position Paper for Govt & SAGE, which presents a different model for the pandemic than the Imperial model, and from its conclusions, argues for substantial changes in the configuration of testing & reinstatement of NHS services.

I have had the same thought. If for any reason you desire a big bump in cases, just chuck a few hundred thousand tests at a modest sized city. If that isn't impressive enough, raise the cycle threshold until it is.

Brilliant. Can you get others speak out??. I am convinced as a 71 year old engineer. I thought just put the oldies away and let the rest go on their way. BUT. would the vulnerable still be got at some point or would viral loads save them? . Finally, what are Aus and NZ going to?

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @driverjess

The herd immunity concept aims to protect the vulnerable by making it very much less likely that a vulnerable person will often meet an infectious person. It's not a guarantee of course, but neither is a vaccine (which we don't yet have). They're rarely 100% protective.

But the biggest issue with the stats is that we have NO IDEA how many mildly symptomatic cases there were as we weren't measuring them. I hoped serology would clear it up but then we learned only the more severe develop measurable antibodies though all prob have T cell immunity

1 1

Helen McArdle @HelenMcArdle3 · 1h
It is just possible that there were always loads of younger people with C19 but we weren't testing them and there is no 'spike' in cases of younger people. We didn't test any children before but since schools went back are testing all kids with colds.

1

Helen McArdle @HelenMcArdle3 · 51m
I suppose one glimmer of light is that all this testing of minimally symptomatic people will give a truer account of the CFR, IFR and hospitalisation rates so that we can better communicate risk and stop disrupting health, education, business and society.

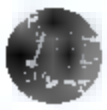
Anything in this? It sounds mad, so prob not...

1

Helen McArdle @HelenMcArdle3 · 1h
Don't know about Europe but certainly not in UK. Emphasis was on keeping people out of hospitals so those admitted with suspected Covid were usually pretty sick eg hypoxia/abnormal CXR.

1

Helen McArdle @HelenMcArdle3 · 1h
Soon after though they started testing all people over 65 in hospital every 3d so that makes the 'hospital admissions' with C19 stats harder to interpret as those would be included too. Presume these became 'cases' even if no symptoms of C19.



1 1

Helen McArdle @HelenMcArdle3 · 1h

The prevalence of the virus in the general population is too low to measure accurately using the available test. This is largely because the false positive rate is greater than the prevalence.

We need to know what the levels of false positives actually are, this info seems to hold the key to hopefully escaping this madness

5 12 45

Melanie Baynes #BlackLivesMatter #FreePalestine @BaynesMe... · 11m

The test is flawed. It was not designed to be a diagnostic test, but a research tool only. It doesn't single out Covid-19 but picks up several coronaviruses inc the common cold, so no wonder the large number of positive results! It is madness & it MUST stop now!

I don't think that's true. It is correct that SARS-COV-2 shares parts of its nucleotide sequence with those of other CoVs including 4 which as you say cause common colds. But the design of the primers (bait) was chosen explicitly not to pick up non-SARS-COV-2 viruses.

Face masks are only to be worn in corridors of schools that are in areas currently affected by lockdowns (which is sensible). Nowhere else.

3 9

Yardley Yeadon @MichaelYeadon3 · 59s

They're a superfluity given the setting. The prevalence of the virus is extremely low. The pupils are at lesser risk passing briefly in a corridor than on the pavement outside the school. They're less likely than adults to infect others. Gaining immunity is also a good thing.

G. @geraij73 · 11h
It sounds like their figures are all over the place and not mirrored elsewhere. Issues around recording?

1

Yardley Yeadon @MichaelYeadon3 · 7h
That's a good point. I started with the assumption of face value. Beyond rumours, is there any truth in it being unreliable? Ta.

1

G. @geraij73 · 5h
Just a hunch from listening to people trying to explain what's going on. However we may be seeing a difference between countries that locked down hard and those that didn't allowing the virus to circulate more freely? Continuation of 1st wave?

1

Yardley Yeadon @MichaelYeadon3 · 3h
I see the theory. I don't know enough to even hazard a guess about whether hard lockdown will prevent transmission. I don't think it did at all in U.K. but our LD was very 'leaky'. People worked, shopped etc. Spain? How was LD run?

1

G. @geraij73 · 3h
I think it was quite harsh - as was France and Italy. They're also required to wear face masks everywhere not that this matters.

France is categorically NOT seeing a hint of a sniff of return to excess deaths. Not in any age group.
Spain: not so sure. There are trends in the 65+ cohorts. I'm expecting to find it's regional & this is a continuation of 1st wave. TBC.

Erik Shookman @The_Cessna · 48m
Likely tons of confounding factors that I'm not qualified to explain. Though I'd suspect it is in part due to varying degrees of heterogeneity between countries, innate immunity, seasonality, population density, etc. Total speculation. I'm sure her paper offers more insight.

They're a superfluity given the setting. The prevalence of the virus is extremely low. The pupils are at lesser risk passing briefly in a corridor than on the pavement outside the school. They're less likely than adults to infect others. Gaining immunity is also a good thing.

1 2

Yardley Yeadon @MichaelYeadon3 · 9h
I genuinely don't understand what those around this issue think they're accomplishing.

2 1

In our area, even private provision is simply not available in the way it was pre-Covid19. I understand Govt reserved many private facilities by paying them to remain available. If correct, it made sense in Mar/Apr, when there was real fear that the NHS would be swamped. Not now.

Craig Nelson @craignelsonUK · 11m

Obviously I don't know either. I'm just presenting questions that arise in my mind. I am thinking that there may be a number of factors at play. If there are then discontinuing them may have an adverse effect.

1 2

Yardley Yeadon @MichaelYeadon3 · 6m

Yes, I agree with you. Even if it turns out to be the case that there is a strong influencing factor, it's entirely that there are others, perhaps several others. Again, I incline away from this as my central interpretation because of the lack of reversal or even inflection in..

1

Yardley Yeadon @MichaelYeadon3 · 4m

...the daily deaths v date curve. It's funny (peculiar, not ha ha) that, until a few weeks ago, I was very bothered by the difference in slope of the drawn-out decline. The U.K. curve was persistently too shallow when compared with this phase in other countries. I inferred a..

...time plot, not only in U.K., but in many other, heavily infected European countries. This common shape prompts me to give more weight to factors which have less to do with voluntary changes in human behaviours. It's certainly possible to construct a theoretical explanation...

1

Yardley Yeadon @MichaelYeadon3 · 13m
...in which SD is a central influencer, but one also needs to explain how likely it is that the degree of changed behaviour had identical net effects on the course of the pandemic. A good explanation is both internally consistent, leans on precedent & requires no unlikely event.

1

Craig Nelson @craignelsonUK · 7m
I agree about the common shape but there must be a range of human behaviours that react to a novel pathogen that can play a role. Like staying in, avoiding crowded indoors, ventilation. That plus the natural progress of a contagion in a population, esp around 20% infection.

Again, I don't disagree. I admire the thought process you're evidencing. It's shows a mental 'beating of the bushes' in being open to as many influences as possible on the resultant. I doubt the explanation I've alighted upon completely explains the outcome.

Last year, 620,000 people died in U.K., many from respiratory viruses, in which flu is the best known, but certainly not the only, example.
I don't recall you complaining about it 12 months ago.

I read Greenhalgh's last release on masks. It didn't contain a single reference to any actual research, it was just an opinion piece. I suspect this one will be the same so, I'll not waste my time on it.

If that wax for me, I assure you I can & often do back all important statements with sci refs. All I wrote is underwritten. That is all.

Great, thank you for reiterating all this. Why does everyone seem to want to prolong the fear etc?

One small question, how do you know what the false positive rate of the testing is? I thought that was an unknown.

Cheers, you are keeping me sane!

It's technically an unknown, but we do know it's not lower than 0.1%. See Heneghan CEBM and he has much careful work in covid19.

Those who've followed my occasional 'streams of consciousness' threads on CV19 might be interested to hear that, this morning, a position paper I've coauthored - broadly resting on the evidence in those threads - has been sent to a significant, senior NHS figure. Fingers X'd.

I wouldn't hold out much hope for talking with administrators.

What might be better is to write to your own GP with a very specific question about a specific skin issue that could arise from masks based on a specific study.

Ask detailed questions at a local level.

It's more than an admin. If I'm correct they're 1 of the decision makers or a direct influencer on same.

Interest has been expressed & I've been asked for CV & bibliography.

I've worked for almost 30 biotech clients since 2011 & if they make that request, I usually get hired!

Bingo. And once again I offer thanks to Tegnell, Giesecke & the Swedish PM.

> **Ruminator Dan** @RuminatorDan
> A more logical interpretation of the data, therefore, is that the UK & many other countries, despite their well-intentioned but aggressive approaches, did not experience better outcomes than Sweden.

A few months ago, a very old post & crown tooth, which I've had, i think, for 40y, came loose. I'd had a painless infection around lockdown & just kept my eye on it. After a week or so, it receded on its own, but the post & tooth were loose. A few days ago, out fell the tooth..

margieb @margieblondon · 8h

I've had a couple of those fall out (years ago) - fixed them/stuck them back with white milliput (lol)...lasted over 20 years.

(I wouldn't want to recommend it though, obvs).

That Milliput is good stuff, isn't it? I've only got grey.
